    \text{COMMISSION} = \text{Net Profit (before commission)} \times \text{rate of commission}/100

Interest on drawing in case of product method =

\[
\text{Total product} \times \frac{\text{rate of interest}}{100} \times \frac{1}{12} \text{ (in case of months)} \text{ or } \frac{1}{365} \text{ (in case of days)}
\]

### Calculation of interest of capital

1. Interest on capital is generally provided for in two situations:
   - (i) when the partners contribute unequal amounts of capitals but share profits equally
   - (ii) where the capital contribution is same but profit sharing is unequal

2. where there are both addition and withdrawal of capital by of partners during a financial year, the interest on capital is calculated as follows:
   - (i) On the opening balance of the capital accounts of partners, interest is calculated for the whole year.
   - (ii) On the additional capital brought in by any partner during the year, interest is calculated from the date of introduction of additional capital to the last day of the financial year.
   - (iii) On the amount of capital withdrawn (other than usual drawings) during the year interest for the period from the date of withdrawal to the last day of the financial year is calculated and deducted from the total of the interest calculated under points: (i) and (ii) above.

*Alternatively, it can be calculated with respect to the amounts remained invested for the relevant periods.*

- In case of insufficient profit: interest is allowed only to the extent of profits in the ratio of interest on capital.

#### Guarantee of Profit to a Partner

Sometimes a partner is admitted into the firm with a guarantee of certain minimum amount by way of his share of profits of the firm. Such assurance may be given by all the old partners in a certain ratio or by any of the old partners, individually to the new partner. The minimum guaranteed amount shall be paid to such new partner when his share of profit as per the profit sharing ratio is less than the guaranteed amount.

#### Past Adjustments

Sometimes a few omissions or errors in the recording of transactions or the preparation of summary statements are found after the final accounts have been prepared and the profits distributed among the partners. The omission may be in respect of interest on capitals, interest on drawings, interest on partner's loan, partner's salary, partner's commissions or outstanding expenses. There may also be some changes in the provisions of partnership deed or system of accounting having impact with retrospective effect. All these acts of omission and commissions need adjustments for correction of their impact. Instead of altering old accounts, necessary adjustment can be made either; (a) through 'Profit and Loss Adjustments', or (b) directly in the capital accounts of the concerned partners.

Kavita had brought additional capital of Rs. 1,60,000 on October 1, 2018. Calculate interest in capital @ 12% p.a. for the year 2018-2019.

Interest on capital will be as Rs. 1, 89, 600 (12% of Rs. 15, 80,000) for Jagdeep and Rs. 81,600 for Kavita calculated as follows:

\[
\left(\frac{6,00,000 \times 12}{100}\right) + \left(\frac{1,600,000 \times 12}{100} \times \frac{6}{12}\right) = 72,000 + 9,600 = Rs. 81,600

4. Arun and Ajay are partners sharing profits and losses in the ratio of 3:2. Their capital accounts showed balance of Rs. 15,00,000 and Rs. Rs. 20,00,000 respectively on March 31, 2018. Show the treatment...
of interest on capital for the year ending March 31, 2019 in each of the
following alternatives:
(a) if the partneresihp deed is silent as to the payment of interest on
capital and the profit for the year is Rs. 5,00,000.
(b) if partnership deed provides for interest on capital @ 8% p.a. and
the firm incurred a loss of Rs. 1,00,000 during the year.
(c) If partnership deed provides for interest on capital @ 8% p.a. and
the firm earned a profit of Rs. 5,00,000; during the year.
(d) if the partnership deed provides for interest on capital @ 8% p.a. and the
firm earned a profit of Rs. 1,40,000; during the year.
Ans. (a) In the absence of a specific provision in the Deed, no interest will be paid
on the capital to the partners. The whole amount of profit will however,
be distributed among the partners in their profit sharing ratio.
(b) As the firm has incurred losses during the accounting year, no interest
on capital will be allowed to any partner. The firm's loss will however be
shared by the partners in their profit sharing ratio.
(c) Interest to Arun @ 8% on Rs. 15,00,000 = 1,20,000
Interest to Ajay @ 8% on Rs. 20,00,000 = 1,60,000
As the profit is sufficient to pay interest at agreed rate, the whole amount
of interest on capital shall be allowed and the remaining profit amounting
to Rs. 2,20,000 (Rs. 5,00,000 - Rs. 2,80,000) shall be shared by the
partners in their profit sharing ratio.
(d) As the profit for the year is Rs. 1, 40,000, which is less than the amount
of interest on capital due to partners. i.e. Rs. 2,80,000 (Rs. 1,20,000 for Arun and Rs. 1,60,000 for Ajay), interest will be paid to the extent of
available profit i.e. Rs. 1,40,000. Arun and Ajay will be credited with Rs.
60,000 and Rs. 80,000, respectively. Effectively this amounts to sharing
the firm's profit in the ratio of interest on capital.
5. Kapil, a partner in a firm withdrew money during the year ending March,
31 2019, from his capital account, for his personal use. Calculate interest in
drawings in each of the following alternative situations, if rate of interest is 9
percent per annum.
(a) if he withdrew Rs. 30,000 per month at the beginning of the month.
(b) if an amount of Rs. 30,000 per month was withdrawn by him at the end
of each month.
(c) if the amounts withdrawn were: Rs. 1, 20,000 on June 01, 2018, Rs 80,000; of August 31, Rs. 30,000; on September 30, 2018, Rs. 70,000,
on November 30, 2018, and Rs. 60,000 on January 31, 2019.
(d) if he withdrew Rs. 3,00,000 per quarter at the beginning of the quarter.

(e) if he withdrew Rs. 3,00,000 per quarter at the end of the quarter.

(f) if he withdrew Rs. 3,00,000 during the year.

(g) if he withdrew Rs. 1,50,000 at the middle of each quarter.

**Ans.**

(a) \[3,60,000 \times \frac{9}{100} \times \frac{6.5}{12} = \text{Rs. 17,550}\]

(b) \[3,60,000 \times \frac{9}{100} \times \frac{5.5}{12} = \text{Rs. 14,850}\]

   - Profit or Loss of the past year
   - ADD: Abnormal losses
     - Loss on Sale of Fixed Assets
     - Overvaluation of opening stock
     - Undervaluation of closing stock
     - Non-recurring Expenses
     - Capital Expenditure charged as Revenue Expenditure
   - LESS: Abnormal gains
     - Profit on sale of Fixed Assets
     - Overvaluation of closing stock
     - Undervaluation of opening stock

2. Calculate average maintainable profit (as above)
3. Normal of profit = Average Capital Employed \( \times \) \( \frac{\text{Normal rate of return}}{100} \)
4. Super Profit = Average maintainable profits - Normal Profits
5. GOODWILL = SUPER PROFIT \( \times \) NO. OF YEAR'S OF PURCHASE

### Calculation of Goodwill

Average Profit = \( \frac{\text{Total Normal Profit}}{\text{No. of years}} \)

\[
= \frac{180,000 + 1,40000 + 250,000 + 3,60,000 + 3,22,000}{5}
\]

\[
= \frac{12,52,000}{5}
= 2,50,400\text{/}-
\]

Value of Goodwill = Average Profit x No. of years Purchase

\[
= \text{\₹} 250,400 \times 3
\]

\[
= \text{\₹} 7,51,200
\]

**Super Profit Method**

Illustration (3) The average net profits expected of a firm is future are \( \text{\₹} \) 68000 per years and capital invested in the business by the firm is \( \text{\₹} \) 3,50,000. The rate of interest expected from capital invested in this class of business is 12%. The remuneration of the partners is estimated to be \( \text{\₹} \) 8000 for the year. Calculate the value of goodwill on the basis of two years purchase of super profits.
Solution

Average Profit = Average net Profit - Partner's Remuneration Profit

₹ 68000 - ₹ 8000 = ₹ 60,000

Normal Profit = Capital Employed x Normal Rate of Return

₹ 3,50,000 * ₹ 12/100 = ₹ 42,000

Super Profit = Average Profit - Normal Profit

₹ 60,000 - ₹ 42000 = 18000

Goodwill = Super Profit x No. of years purchase

= ₹ 18000 X 2 = ₹ 36,000

Illustration 4. Average profit earned by a firm is ₹ 75,000 which includes undervaluation of stock of ₹ 5000 on average basis. The capital invested in the business is ₹ 8,00,000 & the normal rate of return is 8 %. Calculate goodwill of the firm on the basis of 5 times the Super Profit.
Solution

Adj. Average Profit = Average Profit + Undervaluation of stock

₹ 75000 + ₹ 5000
= ₹ 80,000

Normal Profit = Capital Employed x Normal Rate of Return

= ₹ 800,000 x 8
100
= 64,000

Super Profit = Adjusted Average Profit - Normal Profit

= ₹ 80,000 x 2 = ₹ 80,000 - ₹ 64,000
= ₹ 16000

Goodwill = ₹ 16000 x 5 = ₹ 80,000

<td>₹ 20,000 (Dr)</td>
</tr>
</tbody>
</table>

The firm earned an average profit of ₹ 97000. If the normal rate of return is 8%, find the value of goodwill.
Solution

Capital Employed = ₹ 400,000 + ₹ 4,80,000 + ₹ 10,00,000 - ₹ 20,000

= ₹ 9,60,000

Capitalised value of the Business = \[ \frac{\text{Average Profit} \times 100}{\text{Normal Rate of Return}} \]

₹ 97,000 \times \frac{100}{8} = ₹ 12,12,500

Goodwill = ₹ 12,12,500 - ₹ 960,000

= ₹ 2,52,500

**Capitalisation of Super Profit Method**

Illustration 6. Average Profit of the firm is ₹ 1,50,000. Total tangible assets in the firm are ₹ 12,00,000 & outside liabilities are ₹ 7,00,000. In the same type of business, the normal rate of return is 20 %. Calculate the value of goodwill of the firm by Capitalisation of Super Profit method if the goodwill is valued at 2 years. Purchase of Super Profit.

Solution

Normal Profit = Capital Employed \times \frac{\text{Normal Rate of Return}}{100}

= ₹ 5,00,000 \times \frac{20}{100}

= ₹ 1,00,000

Capital Employed = Total tangible Assets - Outside liabilities

= ₹ 12,00,000 - ₹ 7,00,000

= ₹ 5,00,000
Average Profit \[= \, \text{₹} 1,50,000 \text{ (given)}\]

Super Profit \[= \, \text{Average Profit} - \, \text{Normal Profit}\]

\[= \, \text{₹} 1,50,000 - \, \text{₹} 1,00,000\]

\[= \, \text{₹} 50,000\]

Super Profit \[= \, \frac{\text{Super Profit}}{\text{Normal rate of return}} \times 100\]

\[= \, \text{₹} \, \frac{50,000 \times 100}{20}\]

\[= \, \text{₹} 2,50,000\]

Ques.6. On April 1, 2018, a firm has assets of ₹ 1,00,00 excluding stock of ₹ 20,000. The current liabilities were ₹ 10,000 and the balance constituted partner's capital Accounts. If the normal rate of return is 8%, the Goodwill of the firm is valued at ₹ 60,000 at four years purchase of super profit, find the actual profits of the firm.

Sol. Total Assets = ₹ 1,20,000

Capital Employed = Total Assets - Current Liabilities

= 1,20,000 - 10,000

= ₹ 1,10,000
Normal Profits = 8% of 1, 10,000

= ₹ 8,800

Goodwill = Super Profits X No. of Years Purchase

Super Profits = Actual Average Profits - Normal Profits

Given Goodwill = ₹ 60,000

60,000 = 4 (Average Actual Profits - Normal Profits)

15,000 = Average Actual Profits - 8,000

Average Actual Profits = 15,000 + 8,800 = ₹ 23,800

CHAPTER - 4 RECONSTITUTION OF PARTNERSHIP
SACRIFICING & GAINING RATIO

Illustration 1) A, B & C ar Partners sharing profits in the ratio of 5:3:2. They decided to share profits in the future in the ration of 2:2:1 w.e.f 1st April 2019. Calculate Sacrificing & Gaining Ratio?

Solution:
Sacrificing ratio = Old ratio - New ratio

A = \frac{5}{10} - \frac{2}{5} = \frac{5-4}{10} = \frac{1}{10} \quad \text{Sacrifice}

B = \frac{3}{10} - \frac{2}{5} = \frac{3-4}{10} = \frac{-1}{10} \quad \text{Gain}

C = \frac{2}{10} - \frac{1}{5} = \frac{2-2}{10} = 0

TREATMENT OF GOOD WILL

Illustration 2. A, B & C are partners sharing profit & losses in the ratio of 5:4:1. It was decided that w.e.f. 15th April 2019. The profit sharing ratio will be 9:6:5. Goodwill is to be valued at 2 years purchase of average profits of last 3 years profits. The profit for 2016-17, 2017-18 & 2018-19 were ₹ 42,000, ₹ 48,000 & ₹ 60,000 respectively. Goodwill appears in the books at ₹ 10,000. Pass necessart journal entry for the treatment of goodwill. Also give journal entries if goodwill is raised & writeen off.
WHEN GOODWILL IS ADJUSTED THROUGH PARTNER’S CAPITAL A/C

Average Profit = ₹ 42,000 + ₹ 48,000 + ₹ 60,000 = ₹ 50,000

Goodwill = ₹ 50,000 x 2 = ₹ 1,00,000

Sacrificing/ Gaining Ratio

A = \( \frac{5}{10} - \frac{9}{20} = \frac{10-9}{20} = \frac{1}{20} \) (Sacrifice)

B = \( \frac{4}{10} - \frac{6}{20} = \frac{8-6}{20} = \frac{2}{20} \) (Sacrifice)

C = \( \frac{1}{10} - \frac{5}{20} = \frac{2-5}{20} = \frac{-3}{20} \) (Gain)

Adjustment of capital

(i) Adjustment of Old Partners’ Capital on the basis of new Partners’ Capital

Step 1. Calculate total Capital of the firm on the basis of New Partners’ Capital:
Total capital of the firm on the basis of New Partners’ Capital
Capital of the New Partner
Share of profit of New Partner

Step 2. Determine New Capital of each Partner by dividing the Total Capital in new profit sharing ratio.

Step 3. Ascertain Present Capital of the Old Partners’ after all adjustments
**NEW PROFIT SHARING RATIO**

**Illustration 1.**

A and B are partners in a firm sharing profit and losses in the ratio of 3 : 2. C is admitted for 1/5th share in profits of the firm. Calculate new profit sharing ratio; if—

(a) C gets his share equally from A and B.
(b) C gets it from A and B in 2 : 1.
(c) C gets it 3/20 from A and 1/20 from B.
(d) C gets it wholly from A

**Solution.**

(a) C gets 1/5 equally from A and B

Share acquired by C from A = \( \frac{1}{2} \times \frac{1}{5} = \frac{1}{10} \)

Share acquired by C from B = \( \frac{1}{2} \times \frac{1}{5} = \frac{1}{10} \)
A’s New Share = \( \frac{3}{5} - \frac{1}{10} = \frac{5}{10} = \frac{5}{10} \)

B’s New Share = \( \frac{2}{5} - \frac{1}{10} = \frac{3}{10} = \frac{3}{10} \)

C’s New Share = \( \frac{1}{5} \) or \( \frac{2}{10} \)

New Profit sharing Ratio = A : B : C = 5 : 3 : 2

(b) C gets 1/5 from A and B in 2 : 1

Share acquired by C from A = \( \frac{2}{3} \times \frac{1}{5} = \frac{2}{15} \)

Share acquired by C from B = \( \frac{1}{3} \times \frac{1}{5} = \frac{1}{15} \)

A’s new share = \( \frac{3}{5} - \frac{2}{15} = \frac{7}{15} \)

B’s new share = \( \frac{2}{5} - \frac{1}{15} = \frac{5}{15} \)

C’s new share = \( \frac{1}{5} \) or \( \frac{3}{15} \)

New profit sharing ratio = A : B : C = 7 : 5 : 3

(c) C gets 1/5 from A and B as 3/20 and 1/20 respectively

A’s new share = \( \frac{3}{5} - \frac{3}{20} = \frac{9}{20} \)

B’s new share = \( \frac{2}{5} - \frac{1}{20} = \frac{7}{20} \)

C’s new share = \( \frac{3}{20} + \frac{1}{20} = \frac{4}{20} \)

New profit sharing Ratio = A : B : C = 9 : 7 : 4

(d) C gets 1/5 wholly from A

A’s new share = \( \frac{3}{5} - \frac{1}{5} = \frac{2}{5} \)

B’s new share = \( \frac{2}{5} \)
C's new share = \( \frac{1}{5} \)

New profit sharing Ratio = 2 : 2 : 1 in A : B : C

In case (d), B retains his old share (2/5)

**SACRIFICING RATIO**

**Illustration 2.**

X and Y are partners sharing profit in the ratio 3 : 2. They admit P and Q as new partners. X surrendered 1/3rd of his share in favour of P and Y surrendered 1/4th of his share in favour of Q.

Calculate (a) Sacrificing ratio

(b) New profit sharing ratio X, Y, P and Q.

**Solution:**

(a) **Calculation of Sacrificing Ratio**

X surrenders 1/3 of his share in factor of P = \( \frac{1}{3} \times \frac{3}{5} = \frac{3}{15} \)

Y surrenders 1/4 of his share in favour of Q = \( \frac{1}{4} \times \frac{2}{5} = \frac{2}{20} \)

\[
X : Y = \frac{\frac{3}{15}}{\frac{2}{20}} = \frac{3 \times 20}{3 \times 15} = \frac{60}{45} = \frac{12}{9} = \frac{2}{1}
\]

\[
X : Y = \frac{12}{6} \text{ or } 2 : 1
\]

(b) **Calculation of New Profit sharing ratio**

X’s New share = \( \frac{3}{5} - \frac{3}{15} = \frac{9 - 3}{15} = \frac{6}{15} \text{ or } \frac{24}{60} \)

Y’s New share = \( \frac{2}{5} - \frac{2}{20} = \frac{8 - 3}{20} = \frac{6}{20} \text{ or } \frac{18}{60} \)

P’s = \( \frac{3}{15} \) or \( \frac{12}{60} \)
Illustration 3.

X and Y are partners sharing profit and losses in the ratio 3 : 2. They admit Z into the partnership, who acquires 1/4th of his share from X and 3/16th share from Y.

Calculate New Profit Sharing Ratio and Sacrificing Ratio.

Solution:

Since Z acquires $\frac{1}{4}$th of his share from X

It means he acquires $3 \times \left(1 - \frac{1}{4}\right)$ of his share from Y.

If $3/4$th share of Z = $\frac{3}{16}$ (Received from Y)

\[\text{Z's share} = \frac{3}{16} \times \frac{4}{3} = \frac{1}{4}\]

Share acquired by Z from X = $\frac{1}{4} \times \frac{1}{4} = \frac{1}{16}$

Share acquired by Z from Y = $\frac{3}{16}$

Hence, X's new share = $\frac{3}{5} - \frac{1}{16} = \frac{48 - 5}{80} = \frac{43}{80}$

Y's new share = $\frac{2}{5} - \frac{1}{16} = \frac{32 - 5}{80} = \frac{17}{80}$

Z's share = $\frac{1}{4}$ or $\frac{20}{80}$

New profit sharing ratio = X : Y : Z = 43 : 17 : 20

Sacrificing Ratio X : Y = $\frac{1}{16} : \frac{3}{16} = 1 : 3$
Illustration 4.

(a) A, B and C are partners sharing profits and losses in the ratio of 5 : 3 : 2. C retired and his capital balance after adjustments regarding reserves, accumulated profits/losses and gain/loss on revaluation was ₹ 2,50,000. C was paid ₹ 3,00,000 in full settlement. Afterwards D was admitted for $1/4^{th}$ share. Calculate the amount of goodwill premium brought by D.

Solution:

Goodwill share of C = ₹ 3,00,000 – ₹ 2,50,000 = ₹ 50,000

Firm’s Goodwill = 50,000 × $\frac{10}{2} = ₹ 2,50,000$

D’s share in Goodwill = ₹ 2,50,000 × $\frac{1}{4} = ₹ 62,500$

(b) A and B were partners in a firm. They admitted C as a new partner for 20% share in the profits. After all adjustments regarding general reserve, goodwill, gain or loss on revaluation, the balances in capital accounts of A and B were ₹ 3,85,000 and ₹ 4,15,000 respectively. C bought proportionate capital so as to give him 20% share in the profits.

Calculate the amount of capital to be brought by C.

Solution:

Combined capital of A and B

= ₹ 3,85,000 + ₹ 4,15,000 = ₹ 8,00,000

C’s share = $\frac{1}{5}$th of total capital

Remaining share = $1 - \frac{1}{5} = \frac{4}{5}$

$\frac{4}{5} = ₹ 8,00,000$

C’s capital = ₹ 8,00,000 × $\frac{5}{4} \times \frac{1}{5}$

= ₹ 2,00,000
(C) Rekha, Sunita and Teena are partners in a firm sharing profits in the ratio of 3 : 2 : 1. Samiksha joins the firm. Rekha surrenders 1/4th of her share; Sunita surrenders 1/3rd of her share and Teena surrenders 1/5th of her share in favour of Samiksha. Find the new Profit sharing ratio.

Solution:

Rekha surrenders for Samiksha = \( \frac{1}{4} \times \frac{3}{6} = \frac{3}{24} \)

Sunita surrenders for Samiksha = \( \frac{1}{3} \times \frac{2}{6} = \frac{2}{18} \)

Teena surrenders for Samiksha = \( \frac{1}{5} \times \frac{1}{6} = \frac{1}{30} \)

New share of Rekha = \( \frac{3}{6} - \frac{3}{24} = \frac{9}{24} \)

New share of Sunita = \( \frac{2}{6} - \frac{2}{18} = \frac{4}{18} \)

New share of Teena = \( \frac{1}{6} - \frac{1}{30} = \frac{4}{30} \)

Share of Samiksha = \( \frac{3}{24} + \frac{2}{18} + \frac{1}{30} = \frac{97}{360} \)

New ratio: \( \frac{9}{24} : \frac{4}{18} : \frac{4}{30} : \frac{97}{360} = 135 : 80 : 48 : 97 \)

Illustration 5. When Premium for Goodwill is Brought in Cash

(a) A and B are partners in a firm sharing profits and losses in the ratio of 3 : 2. C is admitted as a new partner. A surrenders 1/5th of his share and B 2/5th of his share in favour of C. Goodwill of the firm is valued at ₹ 75,000. C brings his share of goodwill in cash.

Journalise the above transaction when–

(i) Goodwill is retained in the firm

(ii) Goodwill is withdrawn by old partners

Solution:

(i) Goodwill is Retained in the Firm
### Goodwill is Withdrawn by Old Partners

### Working Notes:

1. Calculation of Sacrificing ratio—

   A’s Sacrifice \( \frac{1}{5} \) of his share = \( \frac{1}{5} \times \frac{3}{5} = \frac{3}{25} \)

   B’s Sacrifice \( \frac{2}{5} \) of his share = \( \frac{2}{5} \times \frac{2}{5} = \frac{4}{25} \)

   Thus, Sacrificing ratio of A : B = 3 : 4

2. Calculation of C’s share of Goodwill—

   C’s share of profit = \( \frac{3}{25} + \frac{4}{25} = \frac{7}{25} \)
Hence, C's share of Goodwill = \[\frac{7}{25} \times 75,000 = \text{₹} 21,000\]

(b) When Premium for Goodwill is Brought in Kind

**Working Note:** Calculation of New Profit sharing ratio–

Let total share of the firm = 1

Geeta’s share = \( \frac{1}{4} \)

Remaining share = \( 1 - \frac{1}{4} = \frac{3}{4} \)

Neeta’s new share = \( \frac{3}{4} \times \frac{2}{3} = \frac{2}{4} \)

Sunita’s new share = \( \frac{3}{4} \times \frac{1}{3} = \frac{1}{4} \)

Hence, New profit sharing ratio N : S : G = 2 : 1 : 1
(d) When Premium for Goodwill is Partly Brought in Cash

**Working Note:**

1. Calculation of New profit sharing ratio–

   Geeta's share = \( \frac{1}{4} \)

   Remaining share = \( 1 - \frac{1}{4} = \frac{3}{4} \)

   Neeta's new share = \( \frac{3}{4} \times \frac{1}{2} = \frac{3}{8} \)

   Sunita's new share = \( \frac{3}{4} \times \frac{1}{2} = \frac{3}{8} \)

   Hence, New profit sharing ratio \( N : S : G = 3 : 3 : 2 \)

2. Calculation of amount of Goodwill to be raised and written off

   Amount of Goodwill not brought by Geeta = 400

   His share of profit = \( \frac{1}{4} \)

   Amount of Goodwill to be raised and written off = \( 400 \times \frac{4}{1} = 2400 \)

Naresh and Suresh are partners in a firm sharing profits and losses in the ratio of 3 : 1. On April 1\(^{st}\) 2019, they admitted Rahul as a partner for 1/5\(^{th}\) share in the profits of the firm. On the date of admission, the balance sheet showed a General Reserve of ₹ 1,20,000; a debit balance of ₹ 60,000 in Profit and Loss A/c; Workmen compensation Reserve of ₹ 1,50,000 and Investment fluctuation Reserve of ₹ 10,000.

(ii) Goodwill of the firm be valued at ₹ 2,40,000.
(iii) There was a claim of Workmen compensation for ₹ 1,70,000.
(iv) The market value of investment was ₹ 18,000 less than the Book value.
(v) The partners decided to share future profits in the ratio of 3 : 1 : 1.
Pass the necessary Journal entries on Rahul's admission.

#### Working Note:

1. Calculation of C’s share of Goodwill—
   - Total capital of new firm on the basis of C’s capital
     
     \[
     \text{Total capital of new firm} = 26000 \times \frac{4}{1} = ₹ \, 1,04,000
     \]

2. Total capital of A, B and C
   
   \[
   \text{Total capital of A, B and C} = ₹ \, 26000 + ₹ \, 22000 + ₹ \, 26000
   \]
   
   \[
   = ₹ \, 74000
   \]
Goodwill of the firm

\[ \text{Goodwill of the firm} = \text{Total capital of new firm} - \text{Combined capital of A, B and C} \]

\[ = \text{₹ 104000} - \text{₹ 74000} \]

\[ = \text{₹ 30000} \]

C's share of Goodwill

\[ = 30000 \times \frac{1}{4} = \text{₹ 7500} \]

(2) In the absence of information, profits will be shared equally.

Working Note: (1) Calculation of sacrificing ratio–

Sacrificing ratio = Old ratio – New ratio

\[ X = \frac{\frac{5}{8} - \frac{4}{9}}{\frac{72}{72}} = \frac{13}{72} \]

\[ Y = \frac{\frac{3}{8} - \frac{3}{9}}{\frac{72}{72}} = \frac{3}{72} \]

Sacrificing ratio = 13 : 3

(2) From Z's share of goodwill, his current A/c has been debited instead of A/c so that his Capital is not reduced and remains intact at ₹ 30,000.

On the above date, the partners decide to admit Anshu as a partner on the following terms:

(i) The new profit-sharing ratio of Deepika, Rajshree and Anshu will be 5 : 3 : 2, respectively
(ii) Anshu shall bring ₹ 32,000 as his capital.
(iii) Anshu is unable to bring in any cash for his share of goodwill. Partners, therefore, decide to calculate goodwill on the basis of Anshu's share in the profits and the capital contribution made by him to the firm.
(iv) Plant and Machinery would be increased by ₹ 12,000.
(v) Stock would be increased to ₹ 40,000.
(vi) Provision for Doubtful Debts is to be maintained at ₹ 4,000. Value of Land and Building has appreciated by 20%. Furniture has depreciated by 10%.
(vii) There is an additional liability of ₹ 8,000 being outstanding salary payable to employees of the firm. This liability is not included in the outstanding liabilities, stated in the above Balance sheet. Partners decide to show this liability in the books of accounts of the reconstituted new firm.

Working Note: (1) Bank Balance : ₹ 2,800 + ₹ 32,000 – Bank Overdraft ₹ 6,000 = ₹ 28,800.

(2) Calculation of Hidden Goodwill –
Total capital of firm based on Anshu shave should be–
₹ 32,000 × $\frac{10}{2}$ = ₹ 1,60,000
Less Capital of Deepika (48,000 + 10,680) = ₹ (58,680)
Capital of Rajshree (40,000 + 7,120) = ₹ (47,120)
Capital of Anshu = ₹ (37,000)
Value of Goodwill = ₹ 22,200
Anshu's share of Goodwill = 22,200 × \( \frac{2}{10} \) = ₹ 4,440

(3) Calculation of sacrificing ratio

Deepika = \( \frac{3}{5} - \frac{5}{10} = \frac{6-5}{10} = \frac{1}{10} \) (Sacrifice)

Rajshree = \( \frac{2}{5} - \frac{3}{10} = \frac{4-3}{10} = \frac{1}{10} \) (Sacrifice)

(4) Journal Entry–

| Anshu's current A/c Dr. | 4,440 |
| To Deepika Capital A/c | 2,220 |
| To Rajshree Capital A/c | 2,220 |

(Being amount of goodwill credited to sacrificing partner in their SR)

**Working Note:**

1. Sacrificing share = Old share – New share

   \[
   A's \text{ new share} = \frac{3}{5} - \left( \frac{1}{3} \times \frac{3}{5} \right) = \frac{3}{5} - \frac{1}{5} = \frac{2}{5} \text{ or } \frac{4}{10} \\
   B's \text{ new share} = \frac{2}{5} - \frac{1}{10} = \frac{3}{10}
   \]
C's new share = \[ \frac{1}{5} + \frac{1}{10} = \frac{3}{10} \]

New Profit sharing ratio A : B : C = 4 : 3 : 3

Sacrificing ratio A : B = 2 : 1

2. Calculation of C's share of Goodwill–

Average profit = \[ \frac{2,40,000 + 4,65,000 + 6,90,000}{3} \]

= ₹ 4,65,000

Normal Profit = 3,15,000

Super Profit = Average profit – Normal profit

= ₹ 4,65,000 – ₹ 3,15,000 = ₹ 1,50,000

Firm's Goodwill = Super Profit × No. of Year's purchase

= ₹ 1,50,000 × ₹ 3,00,000

Super Profit = Average profit – Normal profit

= ₹ 4,65,000 – ₹ 3,15,000 = ₹ 1,50,000

Firm's Goodwill = Super profit × No. yrs' purchase

= ₹ 1,50,000 × 2 = ₹ 3,00,000

C's share of goodwill = ₹ 3,00,000 × 3/10 = ₹ 90,000

3. Adjustment of Capital

A's new Capital = ₹ 5,00,000 × \( \frac{4}{10} \) = ₹ 2,00,000

B's new Capital = ₹ 5,00,000 × \( \frac{3}{10} \) = ₹ 1,50,000

Working Note: (1) Calculation of New Profit sharing ratio–

Let total share of firm = 1

C's share = \( \frac{1}{4} \)

Remaining share = \( 1 - \frac{1}{4} = \frac{3}{4} \)

A's new share = \( \frac{3}{4} \times \frac{3}{5} = \frac{9}{20} \)
B’s new share = \[ \frac{3}{4} \times \frac{2}{5} = \frac{6}{20} \]

New Profit sharing ratio = A : B : C

= \[ \frac{9}{20} : \frac{6}{20} : \frac{1}{4} = 9 : 6 : 5 \]

(2) New Capital of A and B on the basis of C’s Capital–
Total Capital of firms based on

\[ = 20,000 \times \frac{4}{1} = 80,000 \]

therefore, A’s Capital = \[ 80,000 \times \frac{9}{20} \]

B’s Capital = \[ 80,000 \times \frac{6}{20} \]

Deceased Partner share of profit may be calculated

| | 1. On the basis of last years profit (On Average Basis) |
| | 2. On the basis of sales |

Points to remember -
1. When the question is silent about the amount payable to retiring partner, then the whole amount payable is transferred to his/her loan account.
2. In case of death of a partner, Capital Account of the Deceased Partner is closed by transferring the whole amount to the executors of the deceased Partner.
3. Any payment to the executors of the deceased partner is made through executor's account, not through the deceased partners' capital account.
4. Goodwill already appeared in the books must be written off in old PSR.
5. All accumulated profits and all accumulated losses are to be distributed among old partners in their old PSR.
6. In case of specific fund, like investment fluctuation fund, market value of the investment must be considered. For workman compensation fund, actual liabilities must be considered (to be deducted from fund).
7. Revaluation profit/loss is to be distributed in old PSR.

Accounting Treatment
1. Calculation of new profit-sharing ratio and gaining ratio
2. Treatment of goodwill.
3. Revaluation account preparation with the adjustment in respect of unrecorded assets/liabilities.
4. Distribution of reserves and accumulated profits/loss.
5. Ascertainment of share of profit/loss till the date of retirement/death.
6. Adjustment of capital if required.
7. Settlement of the Accounts due to Retired/Deceased partner.

1. **New Profit Sharing Ratio & Gaining Ratio**
   Calculation of the two ratios.
   **Following situations may arise**
   (i) When no information about new ratio or gaining ratio is given in the question
   > In this case it is considered that the share of the retiring partner is acquired by the remaining partners in the old ratio. Then no need to calculate the new ratio/gaining ratio as it will be the same as before.
   (ii) Gaining ratio is given which is different from the old ratio in this case,
   > New share of continuing partner = old share + share gained from the outgoing partner.
   (iii) If the new ratio is given
   > Gaining ratio = New Ratio - Old ratio
2. Treatment Of Goodwill.

Steps to be followed

1. When old goodwill appears in the books then first of all this is written off in the old ratio. Remember **Old Goodwill in Old Ratio.**
   
   All Partner's capital A/c Dr.
   
   To Goodwill A/c

2. After written off old goodwill, adjustment of retiring partner's share of goodwill will be made through the following journal entry
   
   Gaining Partner's Capital A/c Dr. (in gaining ratio)
   
   To Retiring / Deceased Partner's Current A/c (if any)
   
   To Retiring/Deceased Partners' Capital A/c

   **OR**

   Alternative entry with raising of goodwill of its value and written off:-

   1. Journal entries passed are :

   Goodwill A/c Dr. (Current value of goodwill)

   To all partners capital A/c

   (Being the goodwill raised is current value) (In old profit sharing ratio)

   2. Counting partners capitals A/c Dr. (In new profit sharing ratio)

   To goodwill A/c

   (Being the goodwill written of)

3. Revaluation of Assets and Reassessment of Liabilities

Revaluation A/c is prepared in the same way as in the case of admission of a new partner. Profit and loss on revaluation is transferred among all the partners in old ratio.

4. Adjustment of Reserves and Surplus (Profits)

   ( Appearing in the Balance Sheet - Liability Side)

   (a) General Reserve A/c Dr.

   Reserve Fund A/c Dr.

   Profit & Loss A/c (Credit Balance) Dr.

   To all partners' Capital/Current A/c (in old ratio)

   (b) Specific Funds - if the specific funds such as workmen's compensation fund or investment fluctuation fund are in excess of actual requirement, the excess will be transferred to the Capital A/c in old ratio.

   Workmen Compensation Fund A/c Dr.
Investment Fluctuation Funds A/c  Dr

(c) For distributing accumulated losses (P & A/c Dr. Balance)

5. **Adjustment of Capitals**

At the time of retirement/death, the remaining partners may decide to adjust their capitals in their new profit sharing Ratio. Then following situation may arise

   Case 1. When the total capital of the new firm is not given in the question
   • Then the sum of their adjusted capitals of remaining partners' will be treated as the total capital of the new firm which will be divided in their New Profit Sharing Ratio.
   • Excess or Deficiency of capital in the individual capital A/c is calculated.
   • Such excess or shortage is adjusted by withdrawal or contribution in cash or transferring to Partner's current A/cs.

**Journal Entries**

(a) For excess Capital withdrawn by the partners
   \[
   \text{Partner's Capital A/c} \quad \text{Dr.} \\
   \text{To Cash/Bank A/c / Partner's Current A/c} \\
   \]

(b) For deficiency, cash will be brought in by the partner
   \[
   \text{Cash/Bank A/c /Partner's Current A/c} \quad \text{Dr.} \\
   \text{To Partner's Capital A/c} \\
   \]

Case 2. When the capital of the new firm as decided by the partners is specified, divide the capital in new profit sharing ratio and make adjustments accordingly.

Case 3. When the amount payable to retiring partner will be contributed by continuing partners in such a way that their capitals are adjusted proportionate to their new profit sharing ratio then calculations will be as under

> Total capital of the new firm = balance in capital accounts of remaining partners + amount payable to retiring/deceased partner
DEATH OF A PARTNER

Accounting treatment in the case of death is same as in the case of retirement except the following:

1. The deceased partners claim is transferred to his executer's account.
2. Normally the retirement takes place at the end of the Accounting Period but the death may occur at any time. Hence the claim of deceased partner shall also include his share of profit or loss, interest on capital and drawings if any from the date of the last balance sheet to the date of his death.

- Calculation of Profits/ Loss for the intervening Period
  It is calculated by any one of the two methods given below:
  a. On Time Basis: In this method proportionally profit for the time period is calculated either on the basis of last year's profit or on the basis of average profits of last few years and then deceased partner's share is calculated based on his share of profits.
  b. On Turnover or Sales Basis: in this method the profits up to the date of death for the current year are calculated on the basis of current year's sales up to the date of death by using the formula.
     Profits for the current year up to the date of death =
     Sales of the current year up to the date of death/total sales of last year x Profit for the last year.
     Then from this profit the deceased partner's share of profit is calculated.

If the remaining partners decides to change their profit sharing ratio in new firm, then the adjustment entry for deceased partners' share in current year's profit will be passed.

Payment for retiring deceased partner :-

a. When payment is made in full
   retiring deceased partners capitals A/c to bank Dr.

b. When Payment is made in instalments. When payment is made in instalments interest is paid on instalments at agreed price or @ 6% per annum. Journal entries are
(i) When interest is allowed
   Interest A/c Dr. To Deceased Partner’s Executor or retiring partner loan A/c

(ii) When instalment is paid
   retiring partners loan A/c or Desease partners executor a = A/c Dr.
   To Bank A/c (interest & instalment amount)

**Illustration 1:** A, B and C are partners sharing profit and loss in the ratio of 3:2:1 then on retirement of a partner; the gaining ratio/new ratio will be

- On A’s Retirement ratio between B and C will be 2: 1
- On B’s Retirement ratio between A and C will be 3: 1
- On C’s Retirement ratio between A and B will be 3: 2

**Illustration 2:** A, B & C share profit and losses in the ratio 3:2:1. On C’s death his share is taken by A and B in the ratio of 2:1 Calculate new ratio.

Solution: In this case gaining ratio = 2:1 (given)

- A’s old share = 3/6, B’s old share = 2/6 & C’s share = 1/6
- A’s gain = 2/3 of C’s share 2/3* 1/6 = 2/18
- B’s gain = 1/3 of C’s share = 1/3* 1/6 = 1/18
- A’s new share = A’s old + A’s gain
  = 3/6 + 2/18 = 11/18
- B’s new share = B’s old share + B’s gain
  = 2/6 + 1/18 = 7/18
- New ratio = 11:7

**Illustration 3:** A, B and C are partners in the ratio of 3:2:1. C retires and A & B decide to share future profit in the ratio of 5:3. Calculate Gaining ratio of A and B.

Solution: A’s Gain = 5/8- 3/6=3/24

- B’s Gain = 3/8-2/6 = 1/24
- Gaining ratio = 3:1
Illustration 4: A, B and C are partners sharing profits and losses in the ratio of 3:2:1. B retires and gifted \( \frac{1}{2} \) of his share in favour of A and sells remaining share to A and C in the ratio of 1:2. Find out gaining ratio and new ratio.

Solution:
B’s share = \( \frac{2}{6} = \frac{1}{3} \) gifted to A = \( \frac{1}{3} \times \frac{1}{2} = \frac{1}{6} \)

Remaining shares of B = \( \frac{2}{6} - \frac{1}{6} = \frac{1}{6} \)

A’s gain = Gifted share of B + Share sold by B

Share sold by B to A = \( \frac{1}{6} \times \frac{2}{3} = \frac{1}{9} \)

A’s gain = \( \frac{1}{6} + \frac{1}{18} = \frac{3+1}{18} = \frac{2}{9} \)

C’s gain = \( \frac{1}{6} \times \frac{2}{3} = \frac{1}{9} \)

Gaining ratio = \( \frac{2}{9} : \frac{1}{9} \) or 2 : 1

A’s new share = \( \frac{3}{6} + \frac{2}{9} = \frac{9+4}{18} = \frac{13}{18} \)

C’s new share = \( \frac{1}{6} + \frac{1}{9} = \frac{3+2}{18} = \frac{5}{18} \)

New profit sharing ratio of A and C is \( \frac{13}{18} : \frac{5}{18} \) or 13 : 5

Illustration 5: A, B and C were partners sharing profits in the ratio of 6:4:5. On 1st April, 2016, B retired from the firm and the new profit sharing ratio between A and C was decided as 11:4. On B’s retirement, the goodwill of the firm valued at Rs. 1,80,000. Pass journal entry for treatment of goodwill on B’s retirement.

Hints to answer:

Stock ₹ 6,000, Revaluation Profits Rs. 63,600 (distributed in old ratio 5:4:3)

Q’s goodwill share = $72,000 \times \frac{4}{12} = 24,000$ (in gaining ratio of P and R)

Q’s Loan A/c = Rs. 1,85,200,
P’s Capital – Rs. 1,86,000
Q’s Capital – Rs. 1,11,900
Balance sheet total Rs. 5,51,600.

Q.2 L, M and N were partners in a firm sharing profits in the ratio of 3 : 2 : 1. The firm closes its books on 31st March every year and balance of general reserve as on 31.03.2016 was Rs. 12,000.

N died on 1st Oct. 2016. It was agreed between his executors and the remaining partners that:

a) Goodwill be valued at 3 years purchase of the average profits of the previous eight years. The average profits of previous eight years were Rs. 12,000.

b) Revaluation profit was Rs. 18,000.

c) Profit for the year 2016-2017 be taken as having accrued at the same rate as the previous year which was Rs. 30,000.

d) Interest on Capital be provided @ 10% p.a.

Balance is N’s opening Capital & interest on Capital

29,250 - 13,500 = Rs. 15,750

Let N’s Capital = Rs. x

Interest on capital = \( x \times \frac{10}{1000} \times \frac{6}{12} = \frac{x}{20} \)

Rs. 15,750 = \( x + \frac{x}{20} \)

\[ 15,750 = \frac{21x}{20} \]
\[ x = 15,750 \times \frac{1 \times \sqrt{95}}{2} = \text{₹} 15,000 \]

N’s Capital (opening) = \text{₹} 15,000

Interest on Capital = 15000 \times \frac{1 \times \sqrt{95}}{2}

Interest N’s Capital = \text{₹} 750 \times x

(Issue of Debentures as Collateral Security)

Collateral Security: Collateral security means security provided to lender in addition to the principal security. It is a subsidiary or secondary security. The lender will have a right over such debentures only when company fails to pay the loan amount and the principal security is exhausted. No interest is paid on the debentures issued as collateral security because company pays interest on loan.

(i) **First method:** No journal entry to be made in the books of accounts of the company for debentures issued as collateral security. A note of this fact is given in the this case.

(ii) **Second method:** Entry to be made in the books of accounts of the company. A journal entry is made on the issue of debentures as a collateral security; Debentures Suspense is debited because no cash is received for such issue.

Time of Redemption

(a) At maturity: - When repayment is made at the date of maturity of debentures which is determined at the time of issue of debentures.

(b) Before maturity: If articles of association and terms of issue mentioned in prospectus allows, then a company can redeem its debentures before maturity date.

Redemption Methods

(1) Redemption in Lump-sum: When redemption is made at the expiry of a specific period, as per the terms of issue.

(2) Redemption by draw of lots: In this method a certain proportion of debentures are redeemed each year, the debenture for which repayment is to be made is selected by draw of lots.

Sometimes company purchase’s the debentures at more than the redeemable value due to the following reasons:

1. To maintain the solvency ratio.
2. To utilize the surplus money or funds which are lying idle with the company.
3. When rate of interest on debentures is more than the current market rate of interest on debentures in the industry.
Sources of Redemption of Debentures

1. Proceeds from fresh issue of Share Capital or Debentures.
2. From accumulated profit.
3. Proceeds from sale of fixed assets.
4. A company may purchase its own debentures out of its surplus funds. Two terms which are used in the redemption of debentures:

1. **Redemption out of capital:** When a company has not used its reserve or accumulated profit for redemption of its debentures, it is called redemption out of capital. So company using this method have not transferred its profit to DRR A/c. But as per Companies Act, 2013 it is necessary for a company to transfer 25% amount of nominal value of debentures to be redeemed in DRR A/c before redemption of debentures commences.

2. **Redemption out of profit:** Redemption out of profit means that adequate amount of profits are transferred to DRR A/c from Balance in Statement of Profit & Loss A/c before the redemption of debenture commences. This reduces the amount available for dividends to shareholders.

**Debenture Redemption Reserve (DRR):** Section 71 (4) of the Companies Act, 2013 requires the company to create DRR out of the profits available for dividend and the amount credited in DRR shall not be utilizes for any purpose except redemption.

Rule 18(7) of Companies (Share Capital and Debentures) Rules, 2014 requires every Company to create DRR of an amount equal to 25% of the value of outstanding debentures.

b) All India financial institutions (AIFs) regulated by RBI and Banking companies (for both public as well as privately placed debentures)

   DRR is required for publicly issued debentures by the above three classes of companies, not for privately placed.

As per Rule 18(7)(c), every company required to create/maintain DRR shall invest or deposit before 30th April in specified securities a sum which shall not be less than 15% of the amount of debentures maturing for payment during the year ending 31st March of the next year.

**Note:** DRR exist in the books more than 25% of the debentures face value, so it assumed that redemption is out profit. In this case DRR is to be created up to 100% face value of Debentures. So DRR A/c is credited with the difference amount i.e. ₹ 1,00,000 - ₹ 80,000 = ₹ 20,000.

Note: (1) If in any question it is mentioned that redemption of debenture is out of profit, then the Debenture Redemption Reserve A/c should be created with the full face value (100%) of debentures. If DRR is created only with 25% of the total amount of debentures, it would mean that remaining 75% of the debentures have been redeemed out of capital.
(2) So, it would be clear if in a question it is mentioned that the redemption is out of profit, then an amount equal to total amount of debentures (100% of face value of debentures) is to be transferred to DRR A/c. in all other cases (except Companies exempted by the SEBI) DRR would be created with the 25% of the face value of the total debentures.

The rule [Rule 18(7)(b) of the Companies (Share Capital and Debentures) Rules, 2014] It means that a company shall have DRR of at least 25% of the value of outstanding debentures that are to be redeemed.

Please note that DRR is not created on Debentures that are fully convertible or on the convertible part of the partially convertible debenture. Besides, some classes of companies like AIFI, Banking Companies etc., are exempt from creating DRR.

Therefore, where the debentures are redeemed in parts, proportionate amount of DRR to the debentures redeemed shall be transferred to General Reserve after the redemption.

Illustration 10. Max Ltd. had issued 10,000, 7% Debentures of ₹ 100 each on 1st April, 2013, which were to be redeemed as follows:

(a) 2,000 Debentures on 30th June, 2016;
(b) 3,000 Debentures on 31st December, 2016; and
(c) Balance on 30th June, 2017.

Max Ltd. shall create DRR of ₹ 2,50,000 being 25% of ₹ 10, 00,000, i.e., value of outstanding debentures out of profits available for distribution as dividend to shareholders on 31st March, 2016 or in earlier years.

(a) On 30th June, 2016, after redeeming 2,000; 7% Debenture, it shall transfer ₹ 50,000 out of DRR being the amount proportionate to 2,000; 7% Deebntures. The Journal entry will be:

Debenture Redemption Reserve A/c ...Dr. ₹ 50,000
To General Reserve A/c ₹ 50,000

(Being the proportionate amount of 2,000; 7% Debentures redeemed transferred from DRR to General Reserve)
After the transfer of ₹ 50,000 from DRR Account to General Reserve Account, balance left in DRR Account is ₹ 2,00,000 which is 25% of the value of outstanding debentures, i.e., ₹ 8,00,000 (₹ 10,00,000 less ₹ 2,00,000, being the amount of debenture redeemed).

(b) On 31st December, 2016 again the company will follow the same process. After redeeming 3,000; 7% Debentures it shall transfer ₹ 75,000 from DRR Account to General Reserve Account being the amount proportionate to 3,000 Debentures. The Journal entry will be:

Debenture Redemption Reserve A/c ...Dr. ₹ 70,000
To General Reserve A/c ₹ 70,000
(Being the proportionate amount of 3,000; 7% Debentures redeemed transferred from DRR to General Reserve)

After the transfer of ₹ 75,000 from DRR Account to General Reserve Account, balance left in DRR Account is ₹ 1,25,000 which is 25% of the value of outstanding debentures, i.e., ₹ 5,00,000 (₹ 8,00,000 less ₹ 3,00,000, being the amount of debentures redeemed).

(c) On 30th June, 2017 again the company will follow the same process. After redeeming the balance 5,000; 7% Debentures it shall transfer the balance amount in DRR Account, i.e., ₹ 1,25,000 to General Reserve Account. The Journal entry will be:

Debenture Redemption Reserve A/c ...Dr. ₹ 1,25,000
To General Reserve A/c ₹ 1,25,000
(Being the balance amount transferred from DRR to General Reserve)

After the transfer of ₹ 1,25,000 from DRR Account balance left in DRR Account will be Nil.

Redemption method: 2 Draw of lots

CHAPTER 2
FINANCIAL STATEMENT ANALYSIS

Meaning: Financial statement analysis is a systematic process of studying the relationship among the various financial factors contained in the financial statements to have a better understanding of the working and the financial position of a business.

"Financial Analysis consists in separating facts according to some definite plan, arranging them in groups according to certain circumstances and then presenting them in a convenient and easily able and understandable form."
— Finney and Miller

Objectives or Purposes of Financial Statement Analysis

- To measure the Profitability or Earning Capacity of the business
- To measure the Financial Strength of the business
- To make Comparative Study within the firm (intra-firm) and with other firms (interfirm)
- To judge the Efficiency of Management
- To provide Useful Information’s to the Management
- To find out the Capability for payment of interest, dividend etc.
- To measure the Short-term and Long-term Solvency of the business.

Financial Statement Analysis

- Based on basic financial statement which themselves suffer from certain limitations.
- Ignores changes in price level.
- Affected by the personal ability and bias of the analyst.
- Lack of qualitative analysis as only those transaction and events are recorded which can be measured in terms of money.
- When different accounting policies are followed by the two firms then comparison between their financial statement becomes unreliable.
- Analysis of single year’s financial statement have limited use.
- Also affected by the Window dressing
Types of Financial Statement Analysis

There are two main approaches for the analysis of financial statements.

**Horizontal Analysis:** In this type of analysis, figure in the financial statements for two or more years are compared and analysed. It helps in knowing the trends of the business over a period of time. It is also known as **Time series analysis** or **Dynamic Analysis**. Comparative statements and cash flow statements are example of horizontal analysis.

**Vertical Analysis:** In this type of analysis, figures in the financial statement for a single year are analysed. It involves the study of relationship between various items of Balance Sheet or Statement of Profit & Loss of a single year or period. It is also known as **Static Analysis**. Ratio Analysis relating to a particular accounting period are examples of this type of analysis.

**Significance or Importance of Financial Analysis:**

- **For Management:** To know the profitability, liquidity and solvency position; to measure the effectiveness of its own decisions taken and to take corrective measure in future.
- **For Investors:** Investors want to know the earning capacity and future growth prospects of the business which helps in assessing the safety of their investment and reasonable return.
- **For Creditors:** Short-term creditors want to know the liquidity position of the business where as long term creditors want to know about the solvency position and ability to pay the interest consistently.
- **For Govt.:** To know the profitability position for taking taxation decision and to take decisions about the price regulations.
- **For Employees:** To know the progress of the company for assessing bonus, possible increase in wages and to ensure stability of their jobs.
- **For Customers:** To know about the continuance of the business in future.
CHAPTER 3
TOOLS FOR FINANCIAL STATEMENT ANALYSIS

Points to remember:
1. In comparative statement deviation for current year to previous year is always divided by previous year amount.
2. In common size statement of Profit & Loss take revenue from operation as common base not the total revenue.
3. In common size Balance Sheet take Balance Sheet total amount either total assets or total liabilities as common base.

The various tools used for analysis of financial statements are:
- **Comparative Statement**: Financial Statements of two years are compared and changes in absolute terms and in percentage terms are calculated. It is a form of Horizontal Analysis.
- **Common Size Statement**: Figures of Financial Statements are converted in to percentage with respect to some common base.
- **Ratio Analysis**: It is a technique of study of relationship between various items in the Financial Statements.
- **Cash Flow Statement**: It is a statement that shows the inflow and outflow of cash and cash equivalents during a particular period which helps in finding out the causes of changes in cash position between the two balance sheet dates.

### Steps for Capital Calculations:

1. **Absolute amount of share capital for 31-3-2015 = 10,00,000**
   & for 31-3-2016 = 20,00,000
   
   Absolute change in share capital = Current year figure – Previous year figure
   
   = 20,00,000 – 10,00,000 = 10,00,000
   
   % change = \( \frac{\text{absolute change}}{\text{Previous year figure}} \times 100 \)
   
   = \( \frac{10,00,000}{10,00,000} \times 100 = 100\% \)

2. For Reserves & Surplus = \( \frac{2,00,000}{6,00,000} \times 100 = 33.33\% \)
   
   Here absolute change is in negative figure
   
   ∴ % change will also be in bracket indicating -ve%}

3. So on ______

**Things to Remember**

Ø Why do we use tools for financial Analysis?

Financial statements are not ready to use/understand to the users. Therefore, we require tools to analyse them to be easily understandable by all the users.

Ø What are the tools for financial Analysis? Comparative financial statements common size financial statements Ratio Analysis cash flow statement

Ø List any two purposes of comparative statements?

1. To make the information simple & easily understandable.
2. To show the trend of changes.

Ø What are the steps for formation of comparative financial statement?
Step 1: Take the figure of previous year

Step 2: Take the figure of current year

Step 3: Find absolute change = current year figure - Previous year figure

Step 4: Find % change = \( \frac{\text{Absolute change of an item}}{\text{Previous year figure of that item}} \times 100 \)

Ø How to show the negative change in any item

By putting brackets, we can show the negative change

Ø Name the types of comparative financial statements

1. Comparative Balance sheet
2. Comparative Income Statement/comparative statement of profit & loss

What is change in Inventories in inventories = opening stock - closing stock

Ø Common Size statements are also known as ......................

Vertical Analysis and 100% statements

Ø Why do we call common size statements as vertical Analysis?

Why do we call common size statements as 100% statements?

Because all the items of financial statements have to be expressed in terms of a base i.e. 100.

Give any 2 utility of common size statements.

1. To create a relationship between base items & other items of financial statements
2. To establish common base for comparison purposes.

Ø List 2 types of common size financial statements.

2. Common size income statement or common size statement of Profit & Loss

Ø What are the steps for formation of common size financial statement?

Step 1: Take the figure of previous year
Step 2: Take the figure of current year

Step 3: Calculate % total of each item to total of base which is 100 for previous year.

Step 4: Calculate % total of each item to total of base which is 100 for current year.

Ø What is the common base in common size Balance sheet?
Total of equity & Liabilities or total Assets.

Ø What is the common base in common size income statement?
Revenue from operations

Ø What are the 2 types of comparisons in comparative financial statement.
1. Intra firm comparison
2. Inter firm comparison

Ø Give any 2 limitation of comparison financial statement
1. Historical records only
2. Affected by personal judgement

Ø Can we prepare common size statement for a year.
(Yes)

Ø Can we prepare comparative financial statements for a year.
(No)
Points to Remember:

1. Loose tools and stores & spares will be excluded from inventories while calculating. Current ratio and inventories turnover ratio.

2. Provision for doubtful debt will be deducted from Trade receivables for calculating current and liquid ratios. But it will not deduct while calculating trade Receivables turnover ratio.

3. Non-trade Investment will be exclude from shareholder’s funds and Capital employed and Total Assets for calculating solvency and Profitability ratios, and corresponding their income (i.e., interest on Non-trade Investment) will exelucls from Net Profit.

4. Operating cost and operating expenses are reperate concept shouldn’t inter change.

Accounting Ratio: It is an arithmetical relationship between two accounting variables.

Ratio Analysis: It is a technique of analysis of financial statements to conduct a quantitative analysis of information in a company’s financial statements.

“Ratio analysis is a study of relationship among various financial factors in a business.”

–Myers
Expression of ratios: Ratios are expressed in following four ways:

**Pure Ratio** Like 2:1. All liquidity and solvency ratios are expressed in pure form.

**Percentage** e.g. 15%. All profitability ratios are presented in percentage form.

**Times** Like 4 times. All turnover ratios and Interest Coverage Ratio are presented in this form.

**Fraction** like 3/4.

**Classification or Types of Ratios:**
**Liquidity Ratios**

**Current Ratio**

\[
\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}
\]

**Liquid or Quick or Acid Test Ratio**

\[
\text{Liquid Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}
\]

**Supporting Formulae**

1. **Current Assets** = Current Investments (also known as Marketable Securities or S.T. Investment) + Inventories (except Loose Tools & Stores and Spares) + Trade Receivables (Debtors and B.R.) Net after provision for bdd. + Cash and Cash Equivalents (Cash and Bank Balances) + Short Term Loans and Advances + Other Current Assets (Prepaid Expenses, Accrued Income & Advance Tax)

2. **Current Liabilities** = Short Term Borrowings (Bank Overdraft and Cash Credit) + Trade Payables (Creditors and B.P.) + Other Current Liabilities (O/s Expenses, Income Received in Advance, Unpaid or Unclaimed Dividend) + Short Term Provisions (Provision for Tax, Proposed Dividend)

3. **Liquid Assets** = Current Assets - Inventory (closing) - Other Current assets (Prepaid Expenses, Accrued Income & Advance Tax)

4. **Working Capital** = Current Assets - Current Liabilities

5. **Total Assets** = Non-Current Assets + Current Assets

6. **Total Liabilities** = Non-Current Liabilities + Current Liabilities

9. Capital Employed = Shareholders Fund + Borrowed Fund (Non-Current Liabilities)

11. Shareholders Fund = Share Capital + Reserves and Surplus Non-Current Non Trade Investments

Shareholders Fund = Total Assets - Non Current Liabilities - Current / liabilities
(Note: Total Assets will include only Non-Current TRADE Investments for Capital Employed)

Non Current: Investment will remain Non-Current TRADE Investments in Absence of any other information.

**Solvency Ratios**

• Debt - Equity Ratio

Debt - Equity Ratio = \( \frac{\text{Debt (Non Current Liabilities)}}{\text{Equity (Shareholders Fund)}} \)

• Proprietary Ratio

Proprietary Ratio = \( \frac{\text{Shareholders Fund}}{\text{Total Assets}} \)

• Total Asset to Debt Ratio

Total Asset to Debt Ratio = \( \frac{\text{Total Assets}}{\text{Debt (Non Current Liabilities)}} \)

• Interest Coverage Ratio

Interest Coverage Ratio = \( \frac{\text{Profit BEFORE Interest, Tax and Dividend}}{\text{Interest on Long Term Loans}} \)
**Activity or Turnover Ratios**

- **Working Capital Turnover Ratio**
  \[
  \text{Working Capital Turnover Ratio} = \frac{\text{Revenue from Operation}}{\text{Working Capital}}
  \]

- **Inventory Turnover Ratio**
  \[
  \text{Inventory Turnover Ratio} = \frac{\text{Cost of Revenue from Operation}}{\text{Average Inventory}}
  \]

- **Receivable Turnover Ratio**
  \[
  \text{Receivable Turnover Ratio} = \frac{\text{Net Credit Revenue from Operation}}{\text{Average Debt or Average BR.}}
  \]
  \[
  \text{Receivable Turnover Ratio} = \frac{12 \text{ months or 365 days or 52 weeks}}{\text{Debt or Average Collection Period}}
  \]

- **Payable Turnover Ratio**
  \[
  \text{Payable Turnover Ratio} = \frac{\text{Net Credit Purchases}}{\text{Average Creditors + Average B.P.}}
  \]
  \[
  \text{Payable Turnover Ratio} = \frac{12 \text{ months or 365 days or 52 weeks}}{\text{Average Payment Period}}
  \]

**Supporting Formulae**

a) Revenue from Operation (Net Sales) = Total Revenue from Operation - Return of Revenue from Operation

b) Total Revenue from Operation = Cash Revenue from Operation + Credit Revenue from Operation

c) Net Credit Revenue from Operation = Credit Revenue from Operation - Return of Revenue from Operation

d) Cost Of Revenue From Operation (COGS) = Opening Inventory + Net Purchases + Direct Expenses - Closing Inventory

e) Cost Of Revenue From Operation (COGS) = Revenue From Operation - Gross Profit
f) Cost Of Revenue From Operation (COGS) = Cost of Raw Material Consumed
+ Purchases of Stock in Trade
+ Change in Inventory of Finished Goods, WIP, Stock in Trade
+ Direct Expenses

g) Average Inventory = \( \frac{\text{Opening Inventory + Closing Inventory}}{2} \)

h) Average Debtors = \( \frac{\text{Opening Debtors + Closing Debtors}}{2} \)

i) Average B.R. = \( \frac{\text{Opening B.R. + Closing B.R.}}{2} \)

j) Average Creditors = \( \frac{\text{Opening Creditors + Closing Creditors}}{2} \)

k) Average B.P. = \( \frac{\text{Opening BP + Closing B. P.}}{2} \)

l) Average Receivable = Average Debtors + Average B.R.

m) Average Payable = Average Creditors + Average B.P.

In absence of Information

- Debtors = Opening Debtors = Closing Debtors = Average = Debtors
- B.R. = Opening B.R. = Closing B.R. = Average B.R.
- Creditors = Opening Creditors = Closing Creditors = Average Creditors
- B.P. = Opening B.P. = Closing B.P. = Average B.P.

### Profitability Ratio

#### Gross Profit Ratio

\[
\text{Gross Profit Ratio} = \frac{\text{Gross Profit}}{\text{Revenue from Operation}} \times 100
\]

#### Net Profit Ratio

\[
\text{Net Profit Ratio} = \frac{\text{Net Profit After Tax}}{\text{Revenue from Operation}} \times 100
\]
Operating Ratio or Operating Cost Ratio

\[ \text{Operating Ratio} = \frac{\text{Operating Cost}}{\text{Revenue from Operation}} \times 100 \]

Operating Profit Ratio

\[ \text{Operating Profit Ratio} = \frac{\text{Operating Profit}}{\text{Revenue from Operation}} \times 100 \]

Return on Investment or Return on Capital employed

\[ \text{ROI} = \frac{\text{Profit BEFORE Interest, Tax and Dividend}}{\text{Capital Employed}} \times 100 \]

Supporting Formulae

• Net Profit = Gross Profit + Indirect Incomes - Indirect Expenses
  
  \[= \text{Gross profit} + \text{Non-Operating Income} - (\text{Operating Expenses} + \text{Non-Operating Expenses})\]
  
  \[= \text{Gross profit} + \text{Non-Operating Incomes} - \text{Operating Expenses} - \text{Non-Operating Expenses}\]
  
  \[= \text{Gross profit} - \text{Operating Expenses} + \text{Non-Operating Incomes} - \text{Non-Operating Expenses}\]
  
  \[= (\text{Gross profit} - \text{Operating Expenses}) + \text{Non-Operating Incomes} - \text{Non-Operating Expenses}\]

• Net Profit = Operating Profit + Non-Operating Incomes - Non Operating Expenses

• Indirect Expenses = Operating Expenses + Non-Operating Expenses

• Non-Operating expenses Example: Interest Paid on loans a finance cost

• Operating Expenses = Office and Administrative Expenses
  
  + Selling and Distribution Expenses
  
  + General Expenses
  
  + Depreciation

• Operating Expenses = Employee Benefit Expenses + Other Operating Expenses

• Indirect Incomes (also known Non-Operating Incomes)
  
  Example: Interest Received on Investment

• Operating Cost = Cost of Revenue from Operation + Operating Expenses

• Operating Profit = Gross Profit - Operating Expenses
  
  \[= \text{Revenue from Operation} - \text{Cost of Revenue} - \text{Operating Expenses}\]
  
  \[= \text{Revenue from Operation} - (\text{Cost of Revenue} + \text{Operating Expenses})\]

• Operating Profit = Revenue from Operation - Operating Cost

• Operating Profit = Net Profit - Non Operating Incomes + Non-Operating Expenses

RATIO ANALYSIS

Illustration - 1

A firm had current Liabilities of 60,000. After the payment, Current ratio was 3.25:1. Determine current Assets & current ratio before the payment was made.

Sol. Let the current Assets after payment be x

The current Ratio = \frac{Current \ Assets}{Current \ Liabilities} (CA) \frac{x}{60,000 - 20,000}

\frac{3.25}{1} = \frac{x}{60,000 - 20,000}

3.25 \times 40,000 = x

x = 1,30,000

Hence, Current Asset after payment = 1,30,000

Current Asset before payment = (1,30,000 + 20,000) = ₹ 1,50,000

Current Ratio = \frac{CA \ before \ payment}{CL \ before \ payment} = \frac{1,50,000}{60,000}

CR = \frac{2.5}{1}

Illustration - 2

A Ltd. has a current ratio of 3.5:1 & quick ratio of 2:1If excess of current assets over quick assets represented by stock is 24000. Calculate current Assets & current liabilities.

Sol. Current ratio = \frac{CA}{CL}

\frac{3.5}{1} = \frac{CA}{CL}

CA = 3.5 \times CL \quad - 1

Quick ratio = \frac{QA \ (Quick \ Assets)}{CL}

\frac{2}{1} = \frac{CA - \ Stock}{CL}

2CL = CA - 24,000

2CL + 24,000 = CA \quad - 2
From 1 & 2, we get -
\[
\begin{align*}
3.5 \text{ CL} & = 2\text{CL} + 24000 \\
3.5\text{CL} - 2\text{CL} & = 24000 \\
1.5 \text{ CL} & = 24000 \\
\text{CL} & = 24000 \\
\end{align*}
\]
\[
\text{CL} = 16,000
\]
\[
\text{CA} = 3.5 \text{ CL}
\]
\[
= 3.5 \times 16,000
\]
\[
\text{CA} = 56,000
\]

Illustration - 3
The current Ratio is 2:1. State giving reason which of the following transaction would improve, reduce & not change the current Ratio:

(a) Payment of dividend
(b) Purchase of goods on credit
(c) Redeemed 9% Debentures of Rs 100000 at a premium of 10%
(d) Sale of goods for Rs 25000 (cost Rs 20,000)
(e) Issued Rs 100000 Equity shares to the vendors of Machinery.

Sol. (a) Payment of dividend will reduce the current assets & current liabilities by same amount. Hence, current ratio will IMPROVE.
(b) Both current Assets & current Liabilities will Increase by same amount. Hence, Current ratio will REDUCE.
(c) Both current Assets & current Liabilities will Decrease by the same amount. Hence, Current ratio will IMPROVE.
(d) Total current Assets will Increase by Rs 5000 (profit) leaving current liabilities unchanged. Hence, Current ratio will IMPROVE.
(e) Both current Assets & current Liabilities are not affected. Hence No CHANGE in current ratio.

Illustration - 4
Calculate current ratio & Quick ratio from the following:

| Total Debt                  | Rs       | Long term Borrowings | Rs  
|----------------------------|----------|----------------------|------
| Toatal Assets              | 10,00,000|                      | 4,00,000 |
| Fixed Assets               | 1,500,000|                      | 2,00,000 |
| Non- current investment    | 5,00,000 |                      | 1,70,000 |
| Long term Loans Advances   | 1,00,000  | Prepaid Expenses     | 30,000 |

Sol. Current ratio = \[\frac{\text{Current Assets}}{\text{Current Liabilities}}\]

Current Assets = Total Assets - Non current Assets
= Total Assets - (Fixed Asset + Non Current Inv.+ Long term Loans & Adv.)
= 1500,000 - (500 000 + 10 0000 + 100000)
\[
\text{CA} = \text{rs } 800,000
\]

Current Liabilities = Total debt - Non - current liabilities
= Total Debt - (Long term Borrowings + Long term provisions)
= 10,00,000 - (400,000 + 200,000)

\[ \text{CL} = Rs \, 400,000 \]

Current Ratio = Rs 80,000 = 2:1

\[ \text{Rs} \, 400,000 \]

Quick ratio = Quick Assets = Rs 600,000 = 1:5

Current Liabilities Rs 400,000

Quick Assets = Current Assets - inventories - prepaid expenses

= Rs 800,000 - Rs 170,000 - Rs 30,000

\[ \text{QA} = Rs \, 600,000 \]

Trade receivable turnover ratio is 4 times

Cost of revenue from operations is Rs 320,000

Gross profit ratio is 20%

Closing trade receivables were Rs 10,000 more than

Trade receivables in the beginning

Cash revenue from operations is 11/3 of credit revenue from operation

Calculate

(I) Opening trade Receivables

(II) Closing Trade Receivables

Sol. Let total revenue from operations be X

Total revenue from Operations

\[ X = \text{Cost of revenue from Operations} + \text{Gros profit} \]

\[ \frac{320,000 + 20\% \times X}{100} \]

\[ X = \frac{20}{100} \times X = 320,000 \]

\[ \frac{1}{5} \times X = 320,000 \]

\[ 4 \times \frac{X}{5} = 320,000 \]

\[ X = 320,000 \times 5 = 4 \times 320,000 = Rs \, 400,000 \]

Total Revenue

Let credit revenue from operations be Y

Total revenue from Operations = Cash Revenue + Credit Revenue Operations

\[ \frac{400,000}{3} = \frac{1}{3} \times y + y \]

\[ 400,000 = 4 \times \frac{y}{3} \]

\[ y = 400,000 \times 3 = 4 \times 300,000 = Rs \, 300,000 \]

Credit Revenue

Trade Receivables Turnover Ratio = \[ \frac{\text{Credit revenue from Operations}}{\text{Avg. trade Receivables}} \]

\[ \frac{4}{\text{Rs 3,000,000}} \]

Average Trade receivables
Average Trade Receivables  = \(\frac{300,000}{4}\) = Rs 75,000

Let OP Trade receivables be \(z\)
Let CI Trade receivable be \(z + 10,000\)
Avg Trade receivables  = \(\frac{OP \times R + CI \times T|R}{2}\)

\[
\begin{align*}
75000 &= \frac{z + z + 10000}{2} \\
150000 &= 2z + 1000 \\
2z &= 140000 \\
\frac{z}{R} &= \text{Rs 70,000} & \text{op. T|R} \\
\text{CI. T|R} &= 70000 + 10000 = 80000
\end{align*}
\]

Illustration - 6
Calculate the values of opening & closing inventory from the foll. -
Total Sales  Rs 200,000
Sales Revenue  Rs 12,500
Gross Profit  \(1/4\) on cost
Inventory Turnover ratio  = 6 times
Inventory at the beginning is 1:5 times more than the inventory at the end.

Sol. Net sales  = total sales - sales revenue
     = 200,000 - 12500
     = Rs 187500
Gross Profit  = \(1/4\) on cost
Let cost of revenue from operations  = 100
Gross profit  = \(1 \times 100 = 25\)
\[
\frac{4}{100} = 25
\]

Revenue from operations  = 100 + 25 = 125
If revenue from operations is 125, then cost is = 100
If revenue from operations is 187500, then cost is \(100 \times 187500\)
\[
\frac{125}{187500} = 150,000
\]

Inventory turnover ratio  = \(\frac{\text{Cost of revenue from operations}}{\text{Average inventory}}\)
\[
6 = \frac{150000}{\text{Avg inventory}}
\]
Avg Inventory = 150000 = Rs 25000
Avg Inventory  = \(\frac{\text{op. inv + cl. inv}}{2}\)
\[
\text{op inv + cl inv} = \text{Avg inv.} \times 2
\]
\[
= 25000 \times 2 = \text{Rs 50,000}
\]

Let cl. inventory be \(x\)
then op. Inventory  = \(x + 1.5x = 2.5x\)
Hence,
\[
\begin{align*}
x + 2.5x &= 50,000 \\
3.5x &= 50,000
\end{align*}

Liabilities side Approach :-
Capital Employed = Share capital + Reserve + Surplus +
Non Current liabilities - Non - Trade Investment
II ROI = Net profit before int & Tax * 100

Opening capital Employed
Given - Net profit Rs 9,72,000
Add int. on Long term Borrowing Rs 2,40,000
(15% 16,00,000)
Less int. on Non-Trade investment Rs (12,000)
(10% 1,20,000)
Net profit before int. & tax Rs 12,00,000

Calculation of capital employed :-

Asset side Approach :-
Capital Employed = Non Current Assets (excluding Non-trade investment) + Current Assets - Current Liabilities - Current Years Profit
= Rs (20,00,000 + 21,72,000 - 8,00,000, 9,72,000)

= Rs (5,00,00 + 4,20,000+16,00,000 - 1,20,000)

Cost of Revenue from Operations :-
Inventory Turnover Ratio = \( \frac{\text{COGS}}{\text{Average Inventory}} \)
8 = \( \frac{\text{COGS}}{\text{Rs 1,60,000}} \)
COGS = Rs 1,60,000 * 8

Credit sales :-
Trade Receivable Turnover Ratio = \( \frac{\text{Net credit sales}}{\text{average trade receivables}} \)

\text{Net cr. sales} = 6 \times \text{Rs } 2,00,000 \\

\text{Net sales} = \frac{\text{Rs } 12,00,000}{75\%} = \text{Rs } 16,00,000

= \( \frac{\text{Rs 1,20,000}}{\text{Rs 8,00,000}} \) \* 100 = 15%

Calculation of Net profit
Operating profit ratio = 100% Operating Ratio
= 100% - 90%
= 10%

Operating profit Ratio = \( \frac{\text{Operating profit}}{\text{Revenue from Operations}} \) \* 100
10 = \( \frac{\text{Operating Profit}}{8,00,000} \) \times 100

Operating profit = \( \frac{\text{Rs 8,00,000}}{100} \) = Rs 80,000

Net profit = Operating profit + Non operating Income - Non - Operating Expenses
= Rs 80,000 + Rs 44,000 - Rs 4000
= Rs 1,20,000

CHAPTER 5

CASH FLOW STATEMENT

Points to Remember:

1. First decide the nature of enterprise it is financial or Non-Financial.

2. For Calculating depreciation, check the Balance Sheet to find out that values of assets are given at net value (i.e., written down value) or at Gross Block (Shown Accumulated dep. A/c also). There after attempt question according to the instructions.

3. Current Investment or marketable securities is a part of Cash and Cash equivalent as per As-3 (revised.) if both are given separately than marketable securities will be consider as cash equivalent and remaining current Investment will consider in Investing activities.

4. Bank overdraft and cash credit will be consider in financial activity not under working capital changes in operating activities.

Meaning: It is a statement that shows flow (Inflow or outflow) of cash and cash equivalents during a given period of time.

As per Accounting Standard-3 (Revised) the changes resulting in the flow of cash & cash equivalent arises on account of three types of activities i.e.,

1. Cash flow from Operating Activities.
2. Cash flow from Investing Activities.
3. Cash flow from Financing Activities.

Cash: Cash comprises cash in hand and demand deposits with bank.

Cash equivalents: Cash equivalents are short-term, highly liquid investment that are readily convertible into known amount of cash and which are subject to an insignificant risk of change in the value e.g. short-term investment. Generally, these investments have a maturity period of less than three months.

Some examples of cash equivalent: Short-term deposits, marketable securities, treasury bills, commercial papers, money market funds, investment in preference shares if redeemable within three months provided that there is no risk of the failure of the company.

Some types of transaction which are considered movement between cash and cash equivalents are given below:

1. Cash deposited into bank.
2. Cash withdrawn from bank.
3. Sale of cash equivalent securities (e.g., Sale of short-term investment, sale of commercial papers)

4. Purchases of cash equivalent securities (e.g., Purchase of short-term investment, Purchases of Treasury bills)

The above types of transactions are part of cash and equivalents, so these are included in opening and closing cash and cash equivalent only. So these types of transaction should not be included in cash flow from different activities like operating, investing, financing activities.

Preparation of cash flow statement

| Cash flow from operating activities (A) | ……………… |
| Cash flow from investing activities (B) | ……………… |
| Cash flow from financing activities (C) | ……………… |
| Net increase/decrease in cash & cash equivalent (Total of the above three activities) (A+B+C) | ……………… |
| Add: Cash & Cash equivalent in the beginning of the year (Given in opening balance sheet) | ……………… |
| Cash & Cash equivalent at the end of the year | ……………… |

Note 1: The student should ensure that the Cash & Cash equivalent at the end of the year as calculated above will be same as cash & cash equivalent given in closing balance sheet.
Note 2: A, B, C can have negative balance as well indicating cash used in operating investing & financing activities respectively.

Objectives of Cash Flow Statement

1. To ascertain how much cash or cash equivalents have been generated or used in different activities i.e., operating/investing/financing activity.

2. To ascertain the net changes in cash and cash equivalents.

3. To assess the causes of difference between actual cash & cash equivalent and related net earnings/income.

4. To help in formulation of financial policies such as dividend policy, fixed assets policy, capital structure related policy.

5. To help in short-term financial planning.

6. To ascertain the liquidity of enterprises.

Limitations of Cash Flow Statement

1. Non cash transactions are not taken into consideration like shares or debentures issued to vendors, depreciation charged during the year.

2. It is a statement related with past data.

3. It is not used for judging the profitability of enterprise.

4. Accrual accounting concept is ignored in this statement e.g. credit sales, credit purchases, outstanding expenses, accrued income are not included.

Computation of Cash flows from different activities.

(1) Cash flow from operating activities: Operating activities are the main revenue generating activities of the enterprises. It also includes all those transactions which are not included in investing and financing activities.

Indirect Method of calculating the cash flow from Operating Activities: Under this method Net Profit before Tax and Extra-ordinary Item is the starting point for further calculations.
(A) Calculation of Net Profit before Tax and Extra-ordinary Items:

Difference between closing balance and opening balance of Balance in Statement of Profit & Loss A/c

Add:
1. Dividend (final or proposal) paid during the year
2. Interim Dividend paid during the year
3. Profit Transferred to Reserve
   (If reserve of current year increased from previous year)
4. Provision for Taxation made during the year
5. Extra Ordinary Item.
   If any Debited to Statement of Profit & Loss

Less:
1. Refund of Tax credited to Statement of P&L
2. Extraordinary-item if any credited to Statement of P&L
3. Reserves transferred back to statement of Profit and Loss

Net Profit before Tax and Extra-ordinary items

Extraordinary items: These items are not related to normal business operation.
