COURSE STRUCTURE

MATHEMATICS (IX)
(Code No. 041)

The Syllabus in the subject of Mathematics has undergone changes from time to time in accordance with growth of the subject and emerging needs of the society. The present revised syllabus has been designed in accordance with National Curriculum Framework 2005 and as per guidelines given in the Focus Group on Teaching of Mathematics which is to meet the emerging needs of all categories of students. For motivating the teacher to relate the topics to real life problems and other subject areas, greater emphasis has been laid on applications of various concepts.

The curriculum at Secondary stage primarily aims at enhancing the capacity of students to employ Mathematics in solving day-to-day life problems and studying the subject as a separate discipline. It is expected that students should acquire the ability to solve problems using algebraic methods and apply the knowledge of simple trigonometry to solve problems of height and distances. Carrying out experiments with numbers and forms of geometry, framing hypothesis and verifying these with further observations form inherent part of Mathematics learning at this stage. The proposed curriculum includes the study of number system, algebra, geometry, trigonometry, mensuration, statistics, graphs and coordinate geometry, etc.

The teaching of Mathematics should be imparted through activities which may involve the use of concrete materials, models, patterns, charts, pictures, posters, games, puzzles and experiments.

Objectives

The broad objectives of teaching of Mathematics at secondary stage are to help the learners to:

- consolidate the Mathematical knowledge and skills acquired at the upper primary stage;
- acquire knowledge and understanding, particularly by way of motivation and visualization, of basic concepts, terms, principles and symbols and underlying processes and skills;
- develop mastery of basic algebraic skills;
- develop drawing skills;
- feel the flow of reason while proving a result or solving a problem;
- apply the knowledge and skills acquired to solve problems and wherever possible, by more than one method;
- to develop ability to think, analyze and articulate logically;
- to develop awareness of the need for national integration, protection of environment, observance of small family norms, removal of social barriers, elimination of gender biases;
- to develop necessary skills to work with modern technological devices and mathematical softwares.
- to develop interest in mathematics as a problem-solving tool in various fields for its beautiful structures and patterns, etc.
- to develop reverence and respect towards great Mathematicians for their contributions to the field of Mathematics;
- to develop interest in the subject by participating in related competitions;
- to acquaint students with different aspects of Mathematics used in daily life;
- to develop an interest in students to study Mathematics as a discipline.

CHAPTER-1
NUMBER SYSTEMS

KEY POINTS

• 1, 2, 3, .......... are natural numbers which are represented by N.
• 0, 1, 2, 3, .......... are whole numbers which are represented by W.
• .......... −3, −2, −1, 0, 1, 2, 3, .......... are Integers which are represented by Z or I.
• A number is rational number if
  (a) it can be represented in the form of p/q where p and q are integers and q ≠ 0.

  or

(b) its decimal expansion is terminating (e.g. \( \frac{2}{5} = 0.4 \))

or

(c) its decimal expansion is non-terminating recurring (repeating)  
    (e.g. \( 0.1\overline{234} = 0.1234234 \ldots \))
• A number is irrational number if
  (a) it can not be represented in the form of \( \frac{p}{q} \) where p and q are integers and q ≠ 0.

  or

(b) its decimal expansion is non-terminating non-recurring (e.g. \( 0.1010010001 \ldots \)).

• All rational and irrational numbers collectively form real numbers.
• There are infinite rational numbers between any two rational numbers.
• There is a unique real number corresponding to every point on the number line. Also, corresponding to each real number, there is a unique point on the number line.
• Rationalisation of a denominator means to change the Irrational denominator to rational form.
• To rationalise the denominator of \( \frac{1}{\sqrt{a} + b} \), We multiply this by \( \frac{\sqrt{a} - b}{\sqrt{a} - b} \), where a and b are integers.
Laws of Exponents: Let $a > 0$ be a real number and $m$ and $n$ are rational numbers, then

1) $a^m \cdot a^n = a^{m+n}$
2) $a^m \div a^n = a^{m-n}$
3) $(a^m)^n = a^{mn}$
4) $a^m \cdot b^n = (ab)^m$
5) $a^2 = 1$
6) $a^{-n} = \frac{1}{a^n}$

For positive real number $a$ and $b$, the following identities hold

1) $\sqrt{a} \cdot \sqrt{b} = \sqrt{ab}$
2) $\sqrt{a} \div \sqrt{b} = \frac{\sqrt{a}}{\sqrt{b}}$
3) $(\sqrt{a} + \sqrt{b})(\sqrt{a} - \sqrt{b}) = a - b$
4) $(\sqrt{a} + \sqrt{b})^2 = a + 2\sqrt{ab} + b$
5) $(a + \sqrt{b})(a - \sqrt{b}) = a^2 - b$

All natural numbers, whole numbers and integers are rational.

Prime Numbers: All natural numbers that have exactly two factors (i.e., 1 and itself) are called prime numbers. e.g., 2, 3, 5, 7, 11, 13, 17, 19, 23, … etc.

Composite Numbers: Those natural numbers which have more than two factors are known as composite numbers. e.g., 4, 6, 8, 10, 12, …

1 is neither prime nor composite.

CHAPTER-2
POLYNOMIALS

KEY POINTS

1. A Polynomial p(x) in one variable x is an algebraic expression in x of the form
   \[ p(x) = a_nx^n + a_{n-1}x^{n-1} + a_{n-2}x^{n-2} + \ldots + a_2x^2 + a_1x + a_0 \]
   (i) \( a_n, a_{n-1}, \ldots, a_0 \) are constants and \( a_n \neq 0 \)
   (ii) \( a_n, a_{n-1}, \ldots, a_0 \) are respectively the coefficients of \( x^n, x^{n-1}, \ldots, x^0 \).
   (iii) Each of \( a_nx^n + a_{n-1}x^{n-1} + a_{n-2}x^{n-2} + \ldots + a_2x^2 + a_1x + a_0 \) is called a term of the polynomial.
   (iv) \( n \) is called the degree of the polynomial where \( n \) is a non-negative integer.

2. **Degree of the Polynomial**: Highest power of \( x \) in the algebraic expression is called the degree of the polynomial.

3. **Different types of polynomials**:
   Generally, we divide the polynomials in the following categories:
   (i) **Based on degrees**
       
       | Degree | Polynomial | General form | Examples |
       |--------|------------|--------------|----------|
       | (a)    | Linear     | \( ax + b \), | \( x + 1, 2x \) etc. |
       | (b)    | Quadratic  | \( ax^2 + bx + c \), | \( 4x^2 + 5x + \frac{2}{3} \) etc. |
       | (c)    | Cubic      | \( ax^3 + bx^2 + cx + d \), | \( x^3 - 3x^2 + 5 \) etc. |
       | (d)    | Biquadratic| \( ax^4 + bx^3 + cx^2 + dx + e \), | \( x^4 - 16 \) etc. |

   **Note**: A polynomial of degree five or more than five does not have any particular name. Such a polynomial usually called a polynomial of degree five or six or \ldots etc.
   (ii) **Based on Number of Terms**
       
       | No. of Terms | Polynomial | Examples |
       |--------------|------------|----------|
       | (a) 1        | Monomial   | \( 5, 3x, \frac{1}{3}y \) etc. |
       | (b) 2        | Binomial   | \( \sqrt{3} + 6x, x - 5y, x^2 + 2 \) etc. |
       | (c) 3        | Trinomial  | \( \sqrt{2}x^2 + 4x + 2, 5y^4 + 2y + 6 \) etc. |
Note: A polynomial having four or more than four terms does not have particular name. These are simply called polynomials.

(iii) Zero degree polynomial or non-zero constant polynomial.
Any non-zero number (constant) is regarded as polynomial of degree zero or zero degree polynomial. i.e., \( p(x) = a \) where \( a \neq 0 \) is a zero degree polynomial, since we can write \( p(x) = a \),
as 
\[ p(x) = ax^0 \]
e.g., 
\[ 5 = 5x^0, \quad \frac{\sqrt{7}}{2} = \frac{\sqrt{7}}{2} x^0 \]

(iv) Zero Polynomial: A polynomial whose all coefficients are zero is called as zero polynomial i.e., \( p(x) = 0 \). The degree of zero polynomial is not defined or we can not determine the degree of zero polynomial.

4. For a polynomial \( p(x) \) if \( p(a) = 0 \) where \( a \) is a real number we say that ‘\( a \)’ is a zero of the polynomial.

5. If \( p(x) \) is any polynomial of degree greater than or equal to 1 and \( p(x) \) is divided by a linear polynomial \( x - a \), then the remainder is \( p(a) \). This is called remainder theorem.

6. If \( p(x) \) is a polynomial of degree \( \geq 1 \) and ‘\( a \)’ is any real number then
   (i) \( (x-a) \) is a factor of \( p(x) \), if \( p(a) = 0 \) and
   (ii) \( p(a) = 0 \) if \( (x-a) \) is a factor of \( p(x) \).
   This is called factor theorem.

7. A polynomial of degree ‘\( n \)’ can have at most \( n \) zeroes.

  (ii) \( (x-y)^2 = x^2 - 2xy + y^2 \)

  (iv) \( (x+a)(x+b) = x^2 + (a+b)x + ab \)
  (v) \( (x+y+z)^2 = x^2 + y^2 + z^2 + 2xy + 2yz + 2zx \)
(vi) \((x+y)^3 = x^3 + y^3 + 3xy(x+y) = x^3 + y^3 + 3x^2y + 3xy^2\)

(vii) \((x-y)^3 = x^3 - y^3 - 3xy(x-y) = x^3 - y^3 - 3x^2y + 3xy^2\)

(viii) \(x^2 + y^2 = (x+y)(x^2-xy+y^2)\)

(ix)  \(x^2 - y^2 = (x-y)(x^2 + xy + y^2)\)

- **Linear equation in one variable** – An equation which can be put in the form \( ax + b = 0 \), \( a \neq 0 \) and \( a, b \) are real numbers is called a linear equation in one variable.

- **Linear equation in two variables** – Any equation which can be put in the form \( ax + by + c = 0 \), where \( a, b, \) and \( c \) are real numbers and \( a, b \neq 0 \), is called a linear equation in two variables.

INTRODUCTION TO EUCLID'S GEOMETRY

KEY POINTS

• **Introduction**: Euclidean geometry, which is taught today is named after Euclid - he is known as "the father of geometry". Euclid also studied and contributed in other areas of mathematics, including number theory and astronomy.

• **Axiom or Postulates**: Axiom or Postulates are the assumptions which are obvious universal truths. They are not proved.

• **Theorems**: Theorems are statements which are proved using definitions, axioms, previously proved statements and deductive reasoning.

SOME OF EUCLID'S AXIOMS

1. Things which are equal to the same thing are equal to one another.
2. If equals are added to equals the whole are equal.
3. If equals are subtracted from equals the remainders are equal.
4. Things which coincide with one another are equal to one another.
5. The whole is greater than the part.
6. Things which are double of the same things are equal to one another.
7. Things which are halves of the same things are equal to one another.

EUCLID'S POSTULATES AND DEFINITIONS

• **Postulates 1**: A straight line may be drawn from any one point to any other points.

• **Postulate 2**: A terminated line can be produced indefinitely.

• **Postulate 3**: A circle can be drawn with any centre and any radius.

• **Postulate 4**: All right angles are equal to one-another.

• **Postulate 5**: If a straight line falling on two straight lines makes the interior angles on the same side of it taken together less than two right
angles, then two straight lines if produced indefinitely, meet on that side on which the sum of angles is less than two right angles.

CHAPTER-14
STATISTICS

KEY POINTS

• In Statistics we study collection, presentation, analysis and interpretation of data.
• Facts or figures collected with a definite purpose are called data.
• The number of times an observation occurs in the given data is called frequency of the observation.
• Classes intervals are the groups in which all observations are divided.
• For class interval 20-30, 30 is called upper class limit and 20 is called lower class limit.
• Class mark = \( \frac{\text{Lower class limit} + \text{upper class limit}}{2} \)

• Average or mean = \( \frac{\text{Sum of all observations}}{\text{number of observations}} \)

• For raw data mean \( \bar{x} = \frac{\sum_{i=1}^{n} x_i}{n} \) \( \text{Mean (}\bar{x}\text{)} = \frac{X_1 + X_2 + \ldots + X_n}{n} \)

• When frequency \( f_i \) is given Mean \( \bar{x} = \frac{\sum_{i=1}^{n} f_i x_i}{\sum_{i=1}^{n} f_i} \)

• Mode is the value of observation which occurs most frequently.
• For Median arrange the data in ascending order or descending orders.

If number of observations 'n' is odd
median = \( \frac{(n+1)^{th}}{2} \)

If number of observations 'n' is even
median = \( \frac{\left(\frac{n}{2}\right)^{th} + \left(\frac{n}{2} + 1\right)^{th}}{2} \)

CHAPTER-15
PROBABILITY

KEY POINTS

Trials-Trial is an action which results in one or several outcomes.

Example -

i) To toss a coin every time, is called a trial.

ii) To throw a dice every time is called a trial.

- Probability of an event E is given by

\[ P(E) = \frac{\text{Number of Favourable outcomes}}{\text{Total Number of Trials}} \]

- The probability of any event always occur between 0 and 1.
  \[ 0 \leq P(E) \leq 1 \]

- The probability of any sure event is 1.
  \[ P(A) = 1 \]

- The probability of an impossible event is 0.
  \[ P(A) = 0 \]

- The sum of probability of all events is 1.
  \[ P(E) + P(\bar{E}) = 1 \]

PART-A

1. What is the sum of the probabilities of happening of an event & not happening of the event?

2. What could be the probability of happening of an event E?

(i) Height of the cone.

(ii) Curved surface area of the cone.
1. $3\pi^2$

2. 3 times

3. $2x = y$
   $x + y = 180^\circ$
   $x + 2x = 180^\circ$
   $x = 60$
   $\therefore y = 120^\circ$

5. III and IV Quadrants

6. Infinitely many solutions.

7. (i) $-1$, (ii) $0$

8. $\angle PQR + \angle PQS = \angle PRQ + \angle PRT$ (Linear Pair)
   $\angle PQR + \angle PQS = \angle PQR + \angle PRT$ ($\because$ $\angle PQR = \angle PRQ$)
   $\therefore \angle PQS = \angle PRT$

9. $x = 2 \times 60^\circ = 120$
   (angle subtended by an arc at the centre is double the angle subtended by the same arc on the remaining part of the circle).

10. Let angles be $3x$, $5x$, $9x$, $13x$
    $\therefore 3x + 5x + 9x + 13x = 360^\circ$
    $30x = 360^\circ$
    $\therefore x = 12^\circ$
    $\therefore$ Greatest angle $= 13x = 13 \times 2 = 156$.

11. $\angle RQP + \angle QPS = 180^\circ$
    $\therefore \angle RQP = 180^\circ - 50^\circ$
    $\angle RQP = 130^\circ$

12. IN \(\triangle OBC\) and \(\triangle OAD\)

\[\angle B = \angle A = 90^\circ\] (given)

BC = AD \hspace{1cm} (given)

\(\angle BOC = \angle AOD\) \hspace{1cm} (V.O.A)

\[\therefore \triangle OBC \cong \triangle OAD\] (By AAS congruency rule)

\[\therefore OB = OA\] \hspace{1cm} (CPCT)

\[\therefore\] CD bisects AB.

13. \((5 + \sqrt{7}) (2 + \sqrt{5}) = 10 + 5\sqrt{5} + 2\sqrt{7} + \sqrt{35}\)

14. (i) \(P\) (2 Head) = \(\frac{21}{100}\)

(iii) \(P\) (Not Head) = \(\frac{6}{25}\)

15. No. of terms \((n) = 10\) (even)

\[\therefore\] Median = \(\frac{n}{2}^{th} + \left(\frac{n}{2} + 1\right)^{th}\) th term

\[63 = \frac{5^{th} \text{term} + 6^{th} \text{term}}{2}\]

\[\therefore 63 = \frac{x + x + 2}{2} \Rightarrow x = 62\]

OR

\[\text{Mean} = \frac{130}{10} = 13\]

\[\text{Mode} = 12\]

16. \((998)^3 = (1000 - 2)^3\)

\((A - B)^3 = A^3 - B^3 - 3AB (A - B)\)

\[\therefore (998)^3 = (1000)^3 - (2)^3 - 3 \times 1000 (1000 - 2)\]

\[= 1000012000 - 600008 = 994011992\]

17. Construction of triangle.
18. \[ \angle 1 + \angle 2 = \angle 1 + \angle 4 \] (Linear Pair)

\[ \therefore \quad \angle 2 = \angle 4 \]

Similarly \[ \angle 1 = \angle 3 \]

\[ \therefore \text{When two lines intersect, vertically opposite angles are equal.} \]

19. \[ y(+\text{ve}) \quad \begin{array}{c}

1 \\
2 \\
3 \\
4
\end{array} \]

\[ (3, -5) \]

\[ (-4, -3) \]

\[ (6, -4) \]

20. (i) In One Variable

\[ 2x + 9 = 0 \]

\[ x = \frac{-9}{2} \]
(ii) In Two Variable

\[ 2x + 9 = 0 \]

\[ x \]

\[ 2 \]

\[ y \]

21. \[ \angle B + \angle C + \angle D = 180^\circ \]

\[ \angle 1 + (\angle 2 + \angle 3 + \angle 4) = 180^\circ \]

\[ \angle 2 + \angle 2 + \angle 3 + \angle 3 = 180^\circ \]

\[ 2 (\angle 2 + \angle 3) = 180^\circ \]

\[ \angle 2 + \angle 3 = 90^\circ \]

\[ \therefore \angle C = 90^\circ \]

i.e., \( \angle BCD \) is a right angle.

OR

Draw \( AD \perp BC \)

In rt \( \triangle ABC \) and rt \( \triangle ACD \)

\[ AB = AC \]

\[ AD = AD \]

\[ \angle ABD = \angle ADC (= 90^\circ) \]

\[ \therefore \triangle ABD \sim \triangle ACD \]

\[ \therefore \angle B = \angle C \]

22. \[ S = \frac{x + x + x}{2} = \frac{3x}{2} \]

\[ \therefore \text{Area of } \triangle = \sqrt{s(s-a)(s-b)(s-c)} \]
\[ = \sqrt{\frac{3x \times \frac{x}{2} \times \frac{x}{2} \times \frac{x}{2}}{2}} \]
\[ = \frac{\sqrt{3}}{4} x^2 \]

23. In \( \triangle AOD \) and \( \triangle COD \)
   
   \begin{align*}
   OA &= OC & & \text{(diagonal of || gm)} \\
   OD &= OD & & \text{(Common)} \\
   AD &= CD & & \text{(Sides of rhombus)} \\
   \end{align*}
   
   \[ \therefore \quad \triangle AOD \cong \triangle COD \quad \text{(By SSS)} \]
   
   \[ \therefore \quad \angle AOD = \angle COD \quad \text{(CPCT)} \]

   \[ \angle AOD + \angle COD = 180^\circ \quad \text{(Linear Pair)} \]

   \[ \therefore \quad \angle AOD + \angle AOD = 180^\circ \quad \text{(\because \angle AOD = \angle COD)} \]

   \[ \therefore \quad \angle AOD = 90^\circ \]

   \[ \therefore \quad \text{Diagonals of rhombus are \( \perp \) to each other.} \]

24. \[ \frac{1}{7 + \sqrt{2}} = \frac{1}{7 + \sqrt{2}} \times \frac{7 + \sqrt{2}}{7 - \sqrt{2}} = \frac{7 - \sqrt{2}}{49 - 4} \]

   \[ = \frac{7 - \sqrt{2}}{47} \]

25. Correct proof of theorem.

\[ \text{No. of Girls} \]

\[ \text{Activity} \rightarrow \]

\[ \text{Sports} \quad \text{Modification} \quad \text{Yoga} \quad \text{Walking} \]

\[ 164 \quad IX - \text{Mathematics} \]
27. Calculation of sides 120, 170 and 250 cm

\[ \text{Area} = \sqrt{s(s-a)(s-b)(s-c)} \]

Area = 9000 cm\(^2\)

\[ \text{OR} \]

\[ \text{ar } \triangle \text{BEC} = 84 \text{ cm}^2 \text{ (Hero's)} \]

\[ h = \frac{\text{Area} \times 2}{b} = 11.2 \text{ m} \]

Area of trapezium = \(\frac{1}{2}h\ [a + b] = 196 \text{ m}^2\)

28. Using identity \(x^3 + y^3 + z^3 - 3xyz \]

\[ = (x + y + z) (x^2 + y^2 + z^2 - xy - yz - zx) \]

If \(x + y + z = 0\)

RHS \(\Rightarrow 0 \times [x^2 + y^2 + z^2 - xy - yz - zx] = 0\)

LHS \(\Rightarrow x^3 + y^3 + z^3 - 3xyz = 0\)

Hence \(x^3 + y^3 + z^3 = 3xyz\)

29. Correct graph for \(x + y = 4\)

30. Area of 4 walls = 2h \([l + b]\) = 54 m\(^2\)

Area of ceiling = \(L \times b = 20 \text{ m}^2\)

Area to be white washed = 74 m\(^2\)

Cost = Area \times \text{Rate} = ₹ 555

\[ \text{OR} \]

Volume = \(\frac{1}{3} \pi r^2 h = 9856 = 12 \times \pi \times 14 \times 14 \times h\)

(i) \(h = 48 \text{ m}\)

(ii) CSA for cone = \(\pi l\)

\[ l = \sqrt{h^2 + r^2} = 50 \text{ cm} \]

CSA = 2200 cm\(^2\)
