CIRCULAR
(Through MIS)

dated: 21/6/16

It has been observed that Mid Day Meal sample lifting is not being properly facilitated/coordinated by Principals/Head of Schools. Accordingly, following guidelines/instructions are being issued to Principals/Head of Schools for strict compliance:

1. Mid Day Meal samples should be invariably lifted by the representatives of M/s FICCI Research and Analysis Centre themselves.

2. In case of any contaminated/stale Mid Day Meal or finding of foreign particle like worms/insects/cockroach etc. in Mid Day Meal, the school authorities should inform the concerned District office as well as Mid Day Meal Branch (HQ) immediately. The containers of such contaminated/stale Mid Day Meal shall be kept separately in the school to enable representatives of M/s FICCI Research and Analysis Centre to lift the sample themselves in sterilized containers.

3. Further, in the unfortunate event of students falling ill after consuming of Mid Day Meal, the instructions contained in Emergency Plan issued by School Branch vide circular No. DE.(364)/Sch.Br./272 dated 03/03/2015 (copy enclosed) should be strictly followed by the concerned schools.

This issues with the prior approval of the Competent Authority.

Officer Superintendent
(Mid Day Meal)

Copy to:-
1. All DDEs of the Districts, Dte. of Education (THROUGH MIS)
2. P.S. to Secretary (Edn.), Old Secretariat, Delhi-54
3. P.A. to Director (Edn.), Directorate of Education, Old Secretariat, Delhi-54
4. OS(IT) with request to upload the circular in MIS Module of Dte. of Education.

Officer Superintendent
(Mid Day Meal)
GOVERNMENT OF NATIONAL CAPITAL TERRITORY OF DELHI
DIRECTORATE OF EDUCATION: SCHOOL BRANCH
OLD SECRETARIAT: DELHI-110054.

CIRCULAR

Sub: Creating Emergency Response Mechanism in Schools.

School is a place where hundreds/thousands of children of all age groups come for education on a daily basis. Ordinarily, these children stay in the school premises for 6-8 hours. During their stay in the school premises, the safety and security of these children is amongst the first and foremost responsibilities of the Heads of School and the staff. Therefore, every school must have a sound Emergency Response Mechanism in place in order to deal effectively with emergent situations like natural disasters (such as earthquake), fire, violence, falls, stampedes, terror attacks, suicide attempts or children falling sick due to stale/contaminated mid day meal etc.

It has, therefore, been decided that every school (Govt/Aided/Private) must constitute an Emergency Response Team (ERT) in the following manner:

1. Head of School.
2. Vice Principal/Senior Teacher
3. Two Nodal Teachers of Chacha Nehru Sehat Yojna (CNSY)
4. EVGC/Yoga Teacher.
5. PET.
7. Two Asst. Teachers.
8. Two Students each of class IX and XI.

Responsibilities of the Emergency Response Team

The following will, inter alia, be some of the responsibilities of this team:

1. To alert Head of School and all team members without any loss of time and without any panic.
2. To call Police/Fire Brigade/Ambulance, as per requirement.
3. To provide immediate First Aid to the affected student/staff member.
4. To transport the affected individuals to nearby Hospital/Clinic/Nursing Home/Doctor.
5. Arrange means of transport as required.
6. To inform the parents.
7. To maintain and update the Helpline and Emergency Telephone Numbers of Police, Ambulance, Fire brigade, Hospitals, Child Helpline, Regional Centre of Child Welfare Centre.
8. To give instructions to the students/staff through centralized public announcement system.
9. To do the complete documentation of the case.

These are a few responsibilities, only indicative in nature. In emergent situations, the HoS can assign any other duty to any member of staff.

Preventive Measures:

- Time of visitors to be specified on the Notice Board placed at school entrance gate, prominently.
- No photography/videography to be allowed in the school premises without prior approval of District Deputy Director (in case of government and government aided schools).
- Visitors/Outsiders can interact with children in presence of staff member only.
- The students should not be allowed to leave the school premises for any rescue operation.
- School gates, at all times, should remain closed. Only a small entrance may be left open with a guard manning it. No visitor should be allowed inside without the permission of the HoS before/after the public visiting hours.

Medical Emergency:

- First Aid Kits must be available at all the floors/blocks at specified places in the school like, medical room, sports room, staff room, different labs, Principal’s room etc. Everyone in the school must be made aware about the place of its availability during morning assembly.
- Ensure that the First Aid Kit should not contain any medicine which is expired.
- In case of emergency, after giving the First Aid, the child should be taken to nearby Hospital/Clinic/Nursing Home/Doctor without any loss of time. For such emergencies, the HoSs must identify the nearby government/private hospitals, in advance. At least, two teachers must accompany the patient.
• The parents must be informed immediately.
• Looking at the gravity of the case, the HOS must inform the Education Officer and Deputy Director concerned. The complete documentation of the case should be done.

Emergency Situations Caused by Disaster (Earthquake, Fire etc):

• Organize Mock Drills for emergency handling of disaster management.
• A functional alarm system must be there to alert the whole school without any loss of time and without any panic.
• In addition, an effective non electric alarm system should also be in place to handle any emergency.
• The student and the staff members should be made aware repeatedly about the implications of the emergency alarm systems.
• In case of any emergency, the Emergency Response Committee members have to follow the guidelines issued Circular no. F.16/Estate/CC/Fire Safety/2011/3298-3398 dated 01-03-2011 (copy of circular attached).

Emergencies in r/o Children with Special Needs:

The school must be ready to deal with medical emergencies pertaining to children prone to/suffering from:-

➢ Seizures.
➢ Severe allergic reactions.
➢ Diabetes.
➢ Asthma or any other breathing difficulty.
➢ Any type of physical or other handicap.
➢ At the time of admission, parents should be encouraged to reveal the actual health status of child.
• The class teacher and subject teacher should be aware of the medical history of all such students.
• All contact numbers of parents of these children should be noted on the attendance register of the class.
• The Buddy System (i.e. attaching one child with other) should be followed.
• An identified student should be attached with each such student having special medical need or differently abled student by the class teacher. And class teacher should have a record of all students so attached.
• It should be ensured that the identified student must take care of him/herself and the attached student.
• In case of emergency, after giving the First Aid, the child should be taken to nearby Hospital/Clinic/Nursing Home/Doctor.
Looking at the gravity of the case, the HOS may inform the higher officials. The complete documentation of the case should be done.

**Sexual Harassment:**

- Committees have been constituted to handle the issues regarding prevention of Sexual Harassment at School level/District level/HQ level.
- In case, an offence against any child comes to the notice of the staff/student, such person shall provide the relevant information to the Principal/HOS.
- HOS should immediately report to local police.
- Head of School must inform the higher officials (EO/DDE).
- The parents must be informed.
- Call an emergency School Management Committee (SMC) meeting immediately.
- The matter should be referred to Chairperson, Local Child Welfare Committee (CWC) under Department of Women & Child Development (DCWD)- See Annexure I.
- The reporting form should be filled up and submitted to the local police not later than six hours from the incidence of knowledge of abuse through SMC- See Annexure II.
- The HoS/staff must behave sensitively with the affected child. Precaution must be taken that the affected child is not subjected to further trauma by anyone's insensitive behavior.
- Complete documentation of the case should be done.

**Emergency Situations Caused by Stale/Contaminated Mid Day Meal:**

- Mid Day Meal Committee must be functional in the school.
- The Mid Day Meal from all the containers must be tasted by all the committee members at least ½ an hour before distribution.
- In case of any mishapening takes place due to Mid Day Meal, the affected students must be given First Aid by Emergency Response Team.
- After giving the First Aid, the child/children should be taken to nearby Hospital/Clinic/Nursing Home/Doctor.
- The parents must be informed.
- The HOS must inform the higher officials immediately.
- The complete documentation of the case should be done.
- Samples of Mid Day Meal must be preserved for lab testing.
- The guidelines issued by Directorate of Education regarding Mid Day Meal from time to time must be followed.
Tackling Emergent Situations caused by Truancy:

At times, the trend of truancy also might lead to emergencies. For example, students bunking classes and roaming on streets/roads are at major risk.

- All CCTV cameras installed in the schools must be functional, especially in the corridors and entrance etc.
- Each school should have concrete boundary walls with concertina wire and gates properly manned by the guards on 24 hours basis.
- There should be proper illumination at the dark spots and the boundary wall so that nobody can jump over the wall into the school in the night for any nefarious activity.
- No student should be allowed to go out of school during school timings except in unavoidable circumstances with prior the approval of Head of School.
- The Head of School will ensure that after the teaching hours in the school, no child is left behind. Class rooms, laboratories, toilets, lonely places in the school should be checked on a daily basis for this purpose.
- The class teacher should be vigilant about the attendance of the students in the class.
- The habitual late comers and frequent absentees should be monitored by class teacher and their parents must be informed accordingly, in writing, and against proper acknowledgement.
- Monitor Diary should be checked by subject teacher in every period. The subject teacher must inform the class teacher in case of any truancy in any period.
- If any such incident occurs, the inquiry must be done by class teacher /subject teacher about the whereabouts of the student from his/her friends / class mates / parents.
- The complete documentation of the case should be done.

Violence etc Caused by Outsiders:

- A written request to the area SHO must be made to ensure that the PCR Van remains in vicinity at the time of opening and closing of the school, particularly so, in case of Girls and Co-Ed schools.
- The Head of the School must inform in writing to area SHO and Local MCD Office to ensure that there is no Junk food vendor or Tobacco seller outside the gate or in the vicinity of the school.
- During recess hours, sufficient number of teachers should be on duty in the school grounds and other places to ensure that no unwanted incident occurs.
• No student/staff members should leave the school premises during the school timing (including recess) except with prior approval of Head of School under unavoidable circumstances.
• The teachers taking classes during the last period shall not leave their respective classrooms until all the students have left. Floor-wise/wing-wise/gate duties must be assigned for safe & secure movement of students out of school.
• Teachers must be allotted Gate duty at the beginning and closing of the school for the safety of the students as per the module.
• The class In-charges of Pre-primary and Primary classes must have the contact no. of the escorts of the students of their respective classes. Class teachers are not to mark 'Departure' in attendance register before all the children of their respective classes have departed.
• Double shifted schools are advised to have separate entry gates for boys and girls, wherever more than one gate is available. Proposals for a second gate must be moved by Heads of such schools, in case, a separate gate is not available.
• School staff/students should be regularly briefed not to touch any unattended object lying anywhere inside/outside the school. In case, any such object is found, the person who finds it should immediately bring it to the notice of Principal/HOS.
• All the labourers working in the school should be issued a temporary Photo I-Card by the concerned authorities (PWD, DSIDC etc.) and they can be generally checked by security guards.
• If any such crisis occur, PCR Van should be contacted immediately.
• Parents must be informed.
• The complete documentation of the case should be done.

Constitution of the Emergency Response Team does not mean that only these 10-11 people will deal with all sorts of unwanted situations/crises. It goes without saying that in case of an eventuality, the entire staff, right from the Principal to the Peon has to work in co-ordination as a team.

In compliance with the directions passed by the Hon'ble Supreme Court of India in W.P. (C) No. 483/04 in the matter of Avanshi Mehra, etc. & others dated 13/04/2009 and keeping in view the provisions of Delhi Fire Service Act 2007 (Delhi Act 2 of 2009) and Delhi Fire Service Rules 2016, w.e.f 01.07.2010 and in exercise of the powers conferred under section 3 of the Delhi School Education Act, 1973 and Rule 43 of the Delhi School Education Rules, 1975, and all other enabling provisions under the said Act & Rules, the fire & life safety provisions in the school buildings shall be as stipulated hereinafter:

1. The fire and life safety provisions in all new school buildings shall be in accordance with the National Building Code of India, 2005/Building Bye-laws as amended from time to time.
2. All the existing school buildings that are comprised of ground floor only shall provide fire & life safety provisions as under:
   a. Access: The building shall be accessible to the Fire Engines.
   b. Number of doors in a class room: All the class rooms having students more than 60 shall have minimum two doors each 1.0 meter wide.
   c. Fire extinguishers: One carbon dioxide type fire extinguisher 2.5 kg capacity and ISI marked or one ABC type fire extinguisher with ISI mark shall be provided for every 250 square meters of covered area on each floor subject to a minimum of two such extinguishers for every floor. In addition, one fire extinguisher each in laboratory, next to the electrical installation and generator room shall also be provided.
   d. The basement: Any having area more than 200 square meters shall be provided with sprinkler system.
   e. Captive water storage for fire fighting and pumping arrangements: For sprinkler system in basement: a fire pump with 600 liters per minute discharge at 40 meters head (4 kgf/cm²) along with an overhead tank of 5000 liters capacity shall be provided. The pump operation shall be automatic with the assistance of sprinkler system. The overhead water storage tank shall be exclusively for sprinkler system.
3. All the existing school buildings that are comprised of ground plus one upper floor (less than 9 meters in height) shall provide fire & life safety provisions as under:
   a. Access: The building shall be accessible to the Fire Engines.
   b. Number of doors (exit) in a class room: All the class rooms having students more than 65 shall have minimum two doors each 1.0 meter wide.
   c. Staircases: There shall be at least one staircase of 1.5 meters width if the travel distance is more than 30 meters then one additional staircase of 1.5 meters width is required to be provided.
(b) For all existing schools if the width of the main staircase is less than 1.5 meters then an additional fire escape staircase not less than 0.75 meters wide shall be provided.

c. Fire extinguishers: One carbon dioxide type fire extinguisher 2.5 kg capacity and ISI marked or one ABC type fire extinguisher with ISI mark shall be provided for every 300 square meters of covered area or part thereof on each floor subject to a minimum of two such extinguishers for every floor. In addition, one fire extinguisher each in laboratory, near to electrical installation and/or generator room shall also be provided.

e. The basement if any, having area more than 200 square meters shall be provided with sprinkler system.

f. Captive water storage for fire fighting and pumping arrangements: For sprinkler system in basement, a fire pump with 450 liters per minute discharge at 10 meters head (6 kgf/cm²) along with an overhead tank of 5000 liters capacity shall be provided. The pump operation shall be automatic with the actuation of sprinkler system. The overhead water storage tank shall be exclusively for sprinkler system.

4. All the existing school buildings that are ground plus two or more upper floors or more than 9 meters and up to 15 meters in height shall provide fire & life safety provisions as under:

a. Access: The building shall be accessible to Fire engines.

b. Staircase: (i) There shall be at least one staircase of 1.5 meters width. If the travel distance is more than 20 meters then one additional staircase of 1.5 meters width is required to be provided.

(ii) For all existing schools if the width of the main staircase is less than 1.2 meters then an additional fire escape staircase not less than 0.75 meters wide shall be provided.

c. Number of doors (exits) in a class room: All the class rooms having students more than 45 shall have minimum two doors each 1.0 meter wide.

d. Fire Extinguishers: One carbon dioxide type fire extinguisher 2.5 Kg capacity, ISI or one ABC type fire extinguisher with ISI mark shall be provided for every 500 sq.m of covered area or part thereof subject to a minimum of two such extinguishers for every floor. In addition, one fire extinguisher each in laboratory, near to electrical installation and/or generator room shall also be provided.

e. First Aid Hose Reel: A hose reel containing 20m of length and 20 mm bore terminating in to a shut-off valve of 5 mm outlet connected to the pump shall be provided for every 1000 sq.m. of covered area subject to a minimum of one hose reel per floor of the building.

f. The basement if any, having area more than 200 sq.m shall be provided with sprinkler system.

g. Captive water storage for fire fighting: An overhead water tank having 10,000 liters capacity (12,000 liters in case of buildings having sprinkler system) shall be provided exclusively for fire fighting systems.
h) Pumping Arrangements: A fire pump having 450 liters per minute output at 40 meters head (40 Kgf/sq. cm.) mounted at terrace for feeding hose reel and additional pump of similar capacity i.e. 450 liters per minute at 40 meters head if the basement of building is provided with sprinkler system, shall be installed at the terrace. All the pumps shall be automatic in operation.

i) Exit Signage: Exit signs shall be provided in the building at all exits and escape routes at appropriate locations.

5. All the existing school buildings that more than 15 meters in height shall provide fire

Life safety provisions as under:

a) Access: The building shall be accessible to Fire engineers.

b) Staircase: (i) There shall be at minimum two staircase each 1.5 meters wide. If the travel distance is more than 36 meters then one additional staircase of 1.5 meters width is required to be provided.

(ii) For all existing schools if the width of the main staircase is less than 1.5 meters then an additional fire escape staircase not less than 0.75 meters wide shall be provided.

c) Number of doors ( exits) in a class room: All the class rooms having students more than 45 shall have minimum two doors each 1.0 meter wide.

d) Fire Extinguishers: One carbon dioxide type fire extinguisher 2.5 Kg capacity, ISI or one ABC type fire extinguisher with ISI mark shall be provided for every 360 Sq.m. of covered area or part thereof subject to a minimum of two such extinguishers for every floor. In addition, one fire extinguisher each in laboratory, near the electrical installation and/or generator room shall also be provided.

e) First Aid Box Reels: A hose reel containing 30m of length and 25 mm bore terminating into a shut-off nozzle of 5 mm orifice connected to the pump shall be provided for every 1000 sq.m. of covered area subject to a minimum of one hose reel per floor of the building.

f) Internal Hydrant: A down corner system along with internal hydrant and hose box on every floor containing two lengths (12 meters each) having 34 mm diameter delivery hose complete with 3 mm instantaneous coupling and 1.12 mm diameter nozzle shall be provided for every 1000 sq.m. of covered area.

g) Captive Water Storage for fire fighting: An overhead water tank having 25000 liters shall be provided exclusively for fire fighting system.

h) The basement of any building area more than 2000 sq.m. in the building, shall be provided with sprinkler system.

i) Pumping Arrangements: A fire pump having 600 liters per minute output at 40 meters head shall be installed in the terrace and all the pumps shall be automatic in operation.

j) MGFEA: Manually operated electrical Fire Automatic (MGFEA) shall be provided at various locations on each floor of the building.

k) Exit Signage: Exit signs shall be provided in the building at all exits and escape routes at appropriate locations.
1) Stand by power supply: The standby electric generator/alternative source of supply of adequate capacity shall be installed to supply power to essential and service lighting circuit, lifts, exit signs and fire pump in case of failure of normal electric supply. The generator shall be capable of taking starting currents of all the machines and circuits stated above simultaneously and must be automatic in action.

m) Protection of exits by means of Fire check door(s) and or pressurization: The fire check doors of minimum hour fire resistance rating shall be provided at appropriate places along the escape route and particularly at the entrance to lift lobby and stair well, where a funnel or fire effect may be created, inducing an upward spread of fire to prevent spread of fire and smoke. Pressurization system for staircase, lift shaft and lift lobby or corridor, shall be installed as per National Building Code of India Part-IV.

10) Compartmentation: The building shall be suitably compartmentalised so that the fire/smoke remains confined to the area where the fire accident has occurred and does not spread to the remaining part of the building. The services; standby generator, etc. must be segregated from other by erecting fire-resisting wall of not less than 4 hours rating. Each of the compartments must be individually ventilated and the openings for entry into each of these compartments must be fitted with self-closing fire/smoke check doors of not less than one hour fire rating fitted with magnetic latches.

e) All electric cables shall be laid in separate ducts, sealed at every floor with fire resisting material of similar rating. Under no circumstances, two services shall pass through the same duct, i.e. separate ducts shall be used for different purposes.

f) The exits to the staircase from all levels shall be segregated with a self-closing fire smoke check door of not less than 1 hour fire resistance rating. All vertical and horizontal openings at each floor level in entire building shall be sealed properly with the non-combustible material. Whenever false ceiling suspended ceiling is provided, the same shall be of non-combustible in nature and compartmentation shall be extended up to ceiling level. The staircase of basement shall be of enclosed type having fire resistance of not less than 2 h and shall be located at the periphery of the basement to be entered at ground level only from the open air and in such positions that smoke from any fire in the basement shall not obstruct any exit serving the ground and upper stories of the building and shall communicate with basement through a lobby provided with fire resisting self closing doors of 1 hour resistance.

q) Smoke management systems: The building shall be provided with the ventilation strictly in accordance with Part-VIII Section-I and Clause C-1.6 of Part-IV of National Building Code of India. Mechanical ventilation system having interlocking arrangements shall be provided in the basement so that extraction shall continue to operate and supply fan shall stop automatically on detection of detected smoke. Extractors shall be so designed as to be positive in action for entry of fire in basement. The smoke extraction system shall be designed as per NBC Part-V. An air conditioning system shall conform to Section-5 Part-VII and Clause C-1.7 of Part-IV National Building Code of India.
9. General Measures: In addition to above all schools shall ensure compliance of the following safety measures as applicable:
   a) The non-combustible material shall be used for construction of the school building.
   b) All escape routes shall be kept clear of any obstruction and all the gates shall be kept unlocked during the occupancy of the school building.
   c) There shall be proper facilities for storage of LPG cylinders in the laboratories; preferably, these LPG cylinders shall be kept in a separate enclosure away from the classrooms so that there is no threat of fire spreading in the building in case of leakage of gas from LPG cylinder. Whenever LPG is issued for laboratories etc., normal precautions for use of LPG must be observed e.g. LPG stove should be kept away from the electrical wiring which may cause sparks. Similarly, LPG cylinder should be kept in a place where adequate ventilation is available. The rubber tube carrying gas from the LPG cylinder to the stove should be checked regularly and replaced, if necessary. In case smell of gas indication of leakage of gas is observed, such stove should not be used and none of the electrical points should be switched on or switched off. In case of leakage of gas, windows and doors should be opened. In such circumstances, the electrical heater should be operated near the LPG installation. At the place, where LPG cylinders are stored, necessary water spray system shall be provided through a manual control valve located about 35 meters away from such place of storage of the cylinder.
   d) Delhi Fire Service would be providing various types of posters for educating students and teachers on the issue of fire safety and that shall be displayed prominently in the school premises. In some cases, it might even be desirable to keep permanent boards prepared on issues related to fire safety.
   e) The electrical wiring in the school building shall be laid in metal conduit or shall be concealed type. Wherever, there is external wiring, the concerned school shall take steps to put it lead in metal conduit or shall be concealed within a period of 6 months from the date of issue of this circular.
   f) The electrical circuit should not be over-tied. MCB and ELCB shall be provided in electrical installations.
g) As far as possible, the electrical meter board should not be installed in staircases and wherever already installed, it shall be either get removed or enclosed in a metallic box.

h) Non combustible material and/or material with surface flame spread of class 'I' rating shall be used for erection of false ceiling, wall paneling etc.

i) Basement, if any, shall be used as per Building Bye Laws, 1985.

j) School Chekwickian/Caretaker shall switch off all electrical equipment/installations after school hours or after closing of school, which ever is later.

k) The emergency telephone numbers i.e. 100, 101 and 112 as well as the telephone numbers of nearest fire station and nearest police station shall be displayed prominently in the school building.

l) Fire/Evacuation drill should be conducted at least once in 6 months. Request in this regard must be sent to the Delhi Fire Service at least one month in advance so that the Delhi Fire Service can devise its program in respect to and advice on the Fire/Evacuation drill.

m) Wherever generator set is used in the school premises, apart from necessary precautions to take care of induced air pollution, it should be ensured that this generator set is located either on a separate floor or in a separate part of the building with direct access from outside.

n) Schools shall not be allowed in temporary structures such as tents, pandals etc.

7. Fire & Life Safety in Auditorium: All the Schools that have auditorium shall provide following fire & life safety measures:

a) One exit having 0.5 meters mean width for every 150 seating capacity subject to a minimum of two such exits located as remote to each other as possible shall be provided in the Auditorium. The exit gates must always open outwards.

b) First aid and basic first aid shall be provided in the auditorium on either side of the stage.

c) In case, stage is made of wood and/or curtains are provided at the stage, automatic sprinkler system shall be provided to protect the stage only.

d) The basement if any, having area more than 200 SQM, shall be provided with sprinkler system.

e) Emergency light shall be provided.

f) Illuminated exit signs shall be provided at each exit gate.

g) Sufficient number of exhaust fans shall also be provided near the ceiling level for ventilation of smoke in case of fire.

h) In case of Auditorium or buildings having basements of area more than 200 m², a fire pump of capacity 250 liters per minute at 45 meters head (45 kgf cm^2) along with overhead water storage tank of 5000 liters exclusively for fire fighting shall be provided at the terrace to feed sprinkler system. All the pumps shall be automatic in operation.

b) Other Measures:

a) As a part of good housekeeping, it must be ensured that no combustible materials are allowed to accumulates on any store or left un-erased. The combustible materials shall be contained in the containers that they don't spread by wind and it becomes a fire hazard.

b) The above measures preventions are not sufficient for buildings where the original occupancy allowed as per law is a hotel or where the buildings are partly or fully air-conditioned. In
such buildings, the school must get the building inspected by officials of Delhi Fire Service and obtain detailed recommendations about the fire safety measures.

(c) In the cases of both recognition/appraisal, the applicant schools must comply with guidelines issued by the Director of Education and enclose elements from the Delhi Fire Service with their application for grant of recognition/appraisal.

(d) In case of any difficulty in understanding the technical terms or contents of this circular, the Chief Fire Officer/Dy.
