MESSAGE

I would like to congratulate the members of Core Academic Unit and the subject experts of the Directorate of Education, who inspite of dire situation due to Corona Pandemic, have provided their valuable contributions and support in preparing the Support Material for classes IX to XII.

The Support Material of different subjects, like previous years, have been reviewed/ updated in accordance with the latest changes made by CBSE so that the students of classes IX to XII can update and equip themselves with these changes. I feel that the consistent use of the Support Material will definitely help the students and teachers to enrich their potential and capabilities.

Department of Education has taken initiative to impart education to all its students through online mode, despite the emergency of Corona Pandemic which has led the world to an unprecedented health crises. This initiative has not only helped the students to overcome their stress and anxiety but also assisted them to continue their education in absence of formal education. The support material will ensure an uninterrupted learning while supplementing the Online Classes.

MATHEMATICS (IX)

The Syllabus in the subject of Mathematics has undergone changes from time to time in accordance with growth of the subject and emerging needs of the society. The present revised syllabus has been designed in accordance with National Curriculum Framework 2005 and as per guidelines given in the Focus Group of Teaching of Mathematics which is to meet the emerging needs of all categories of students. For motivating the teacher to related the topics to real life problems and other subject areas, greater emphasis has been laid on applications of various concepts.

The curriculum at secondary stage primarily aims at enhancing the capacity of students to employ Mathematics in solving day-to-day life problem adn studying the subject as a separate discipline. IT is expected that students should acquired the ability to solve problem using algebraic methods and apply the knowledge of simple trigonometry to solve problem of height and distances. Carrying out experiments with numbers and forms of geometry, framing hypothesis and verifying these with further observations form inherent part of Mathematics learning at this stage. The proposed curriculum includes the study of number system, algebra, geometry, trigonometry, mensuration, mensuration, statistics, graphs and coordinate geometry, etc.

The teaching of Mathematics should be imparted through activities which may involve the use of concrete materials, models, patterns, charts, pictures, posters, games, puzzles and experiments.

Objectives

The broad objectives of teaching of Mathematics at secondary stage are to help the learners to:

- consolidate the Mathematical knowledge and skills acquired at the upper primary stage; acquire knowledge and understanding, particularly by way of motivation and visualization, of basic concepts, terms, principles and symbols and underlying processes and skills; develop mastery of basic algebraic skills;
- develop drawing skills;
- feel the flow of reason while proving a result or solving a problem;
- apply the knowledge and skills acquired to solve problems and wherever possible, by more than one method;
- to develop ability to think, analyze and articulate logically; to develop awareness of the need for national integration, protection of environment, observance of small family norms, removal of social barriers, elimination of gender biases;

- to develop necessary skills to work with modern technological devices and mathematical software's.
- to develop interest in mathematics as a problem-solving tool in various fields for its beautiful structures and patterns, etc.
- to develop reverence and respect towards great Mathematicians for their contributions to the field of Mathematics;
- to develop interest in the subject by participating in related competitions;
- to acquaint students with different aspects of Mathematics used in daily life;
- to develop an interest in students to study Mathematics as a discipline.

Definition:

KEY POINTS

A Polynomial p(x) in one variable x of degree n is an algebraic expression in x of the form $p(x) = a_n x^n + a_{n-1} x^{n-1} + a_{n-2} x^{n-2} + ... + a_2 x^2 + a_1 x + a_0$, where

- (i) a_0 , a_1 , a_2 a_n are constants and $a_n \neq 0$
- (ii) $a_0, a_1, a_2, \dots, a_n$ are respectively the coefficients of $x^0, x^1, x^2, \dots, x^n$
- (iii) Each of a_nx^n , $a_{n-1}x^{n-1}$, $a_{n-2}x^{n-2}$,, a_2x^2 , a_1x , a are called terms of the polynomial.
- (iv) n is called the degree of the polynomial where n is a non-negative integers.

ZEROES OF POLYNOMIAL:

For a polynomial p(x) if p(a) = 0, where a is a real number we say that 'a' is a zero of the polynomial.

- 1. A polynomial having four or more than four terms does not have particular name. These are simply called polynomials.
- 2. A polynomial of degree five or more than five does not have any particular name. Such a polynomial is usually called a polynomial of degree five or six or ... etc.
- 3. The degree of zero polynomial is not defined or we can not determine the degree of zero polynomial.

Fact About Polynomial:

- **4.** A polynomial of degree 'n' can have at most n zeroes.
- **5.** A non-zero constant polynomial has no-zero.
- **6.** Every real number is a zero of the zero polynomial.

CHAPTER-3 COORDINATE GEOMETRY MIND MAP

Key Points

- Co-ordinate Geometry is the branch of Mathematics in which we study the position of any object lying in a plane, with the help of two mutually perpendicular lines in the same plane.
- In cartesian system, there are two perpendicular straight lines xx' and yy' intersect at O (Origin) in a plane (cartesian plane)
- Coordinates of a point are determined by perpendicular distance from x-axis and y-axis respectively.
- The perpendicular distance of a point from y-axis is called abscissa and from x-axis is called ordinate.
- Coordinates of a point on x-axis are of the form (x,0) and on y-axis are of the form (0,y)
- If x-coordinate of two or more points are same, then the line joining these points is parallel to y-axis.
- If y-coordinate of two or more points are same, then the line joining these points is parallel to x-axis.

Location of a point P(a, b) on graph with sign convention –
 where a and b are such that –

	Value of Point	Sign of Point	Location of Point
i)	a = 0, b = 0		origin
ii)	a > 0, b > 0	(+, +)	Ist Quadrant
iii)	a < 0, b > 0	(-, +)	IInd Quadrant
iv)	a < 0, b < 0	(-, -)	IIIrd Quadrant
v)	a > 0, b < 0	(+, -)	IVth Quadrant

Note: If a point lie on x-axis or y-axis, it does not lie in any quadrant.

• Mirror Image of a point is just a reflection of this point about the mirror.

LINEAR EQUATIONS IN TWO VARIABLES

KEY POINTS

- Linear equation in one variable An equation which can be put in the form ax+b=0, a ≠ 0 and a, b are real numbers is called a linear equation in one variable.
- Linear equation in two variables Any equation which can be put in the form ax+by+c=0, where a, b, and c are real numbers and a, $b \ne 0$, is called a linear equation in two variables.

Linear equation in one variable has a unique solution

$$ax+b=0 \implies x=-\frac{b}{a}$$

- Linear equation in two variables has infinitely many solutions.
- The graph of every linear equation in two variables is a straight line.
- Every point on the line satisfies the equation of the line.
- Every solution of the equation is a point on the line. Thus, a linear equation in two variables is represented geometrically by a line whose points make up the collection of solutions of the equation.

In **APQR**

$$\angle$$
P+ \angle PQR+ \angle PRQ=180°

$$\frac{1}{2}$$
 $\angle P + \angle 1 + \angle 3 = 90^{\circ}$

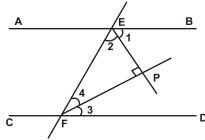

$$\angle 1 + \angle 3 = 90 - \frac{1}{2} \angle P$$

Putting the value of $\angle 1+\angle 3$ in \bigcirc

90°+ZPRM+ZRPM=180°

∠PRM=90°-∠RPM--(iii)

Subracting eq (iii) from (ii)

 $\angle Q$ - $\angle R$ =(90°- $\angle Q$ PM)-(90°- $\angle R$ PM)

∠Q-∠R=∠RPM-∠QPM

 $\angle Q$ - $\angle R$ = $\angle RPA$ - $\angle APRm$ -[$\angle QPA$ - $\angle APM$]

 $\angle Q$ - $\angle R$ = $\angle QPA$ + $\angle APM$ - $\angle QPA$ + $\angle APM$

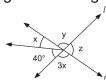

∠Q-∠R=2∠APM

 $\angle APM = \frac{1}{2} (\angle Q - \angle R)$

Solution: Here the pencil is in the form of a cylinder which is made up of an outer cylinder of wood (radius "R") and an inner cylinder of graphite (radius "r") Height of the pencil is 14cm.

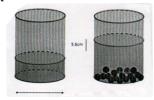

Therefore h = 14cm,

$$R = \frac{7}{2} = 3.5 \text{ mm} = 0.35 \text{cm} \text{ and } r = \frac{1}{2} \text{ mm} = 0.5 \text{mm} = 0.05 \text{cm}$$

Volume of graphite = $V_G = \pi r^2 h = \frac{22}{7} \times 0.05 \times 0.05 \times 14 = 0.11 \text{cm}^3$ Volume of wood = Total volume of the pencil - volume of graphite $V_w = \pi R^2 h - \pi r^2 h = h (R^2 - r^2) = \frac{22}{7} \times 14 \times [(0.35)^2) - (0.05)^2]$ = $22 \times 2 \times 0.4 \times 0.3 = 5.28 \text{cm}^3$

CHAPTER-14 STATISTICS MIND MAP

CHAPTER-14 STATISTICS KEY POINTS

- In Statistics we study collection, presentation, analysis and interpretation of data.
- Facts or figures collected with a definite purpose are called data.
- The number of times an observation occurs in the given data is called frequency of the observation.
- Class intervals are the groups in which all observations are divided.
- For class-interval 20-30, 30 is called upper class limit and 20 is called lower class limit.
- Class mark = $\frac{\text{Lower class limit + upper class limit}}{2}$
- Average or mean = Sum of all observations number of observations
- For raw data, mean $(\overline{x}) = \frac{\sum_{i=1}^{n} xi}{n}$, Mean $(\overline{x}) = \frac{X_1 + X_2 + \dots + Xn}{n}$ When frequency fi is given, Mean $\overline{x} = \frac{\sum_{i=1}^{n} fi x_i}{\sum_{i=1}^{n} fi}$
- Mode is the value of observation which occurs most frequently.
- For Median arrange the data in ascending order or descending order.

If number of observation 'n' is odd Then Median If number of observation 'n' is even

Then Median
$$= \frac{\left(\frac{n}{2}\right)^{th} term + \left(\frac{n}{2} + 1\right)^{th} term}{2}$$

CHAPTER-15 PROBABILITY MIND MAP

KEY - POINTS

Trials - Trial is an action which results in one or several outcomes.

Example:

- (i) Tossing of a coin every time is a trial.
- (ii) Throwing a dice every time is a trail.
 - Probability of an event E is given by

$$P(E) = \frac{\text{Number of favourable outcomes}}{\text{Total number of trails}}$$

•The probability of an event always from 0 to 1.

$$0 \le P(E) \le 1$$

•The probability of any sure event is 1.

$$P(a) = 1$$

•The probability of an impossible event B is 0.

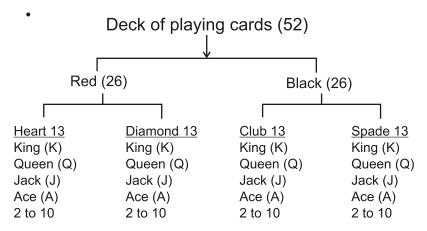

$$P(B) = 0$$

•The sum of all the probabilities of all the trials of an event is 1.

$$P(E_1) + P(E_2) + P(E_3) + \dots = 1$$

• The sum of probabilities of happening and non-happening of an event is 1.

$$P(E) + P(\overline{E}) = 1$$
